Cytotoxins And Immunotoxins For Cancer Therapy:

Cytotoxins and Immunotoxins for Cancer Therapy Koji Kawakami, Bharat B. Aggarwal, Raj K. Puri, 2004-11-15 Recent advances in cytotoxins and immunotoxins are accelerating our understanding of cancer and leading to more effective therapeutic treatments Although a large number of articles have been published on these cytotoxins and immunotoxins this important information has yet to be compiled into one comprehensive resource For the first time Resistance to Immunotoxins in Cancer Therapy Rama Shanker Verma, Benjamin Bonavida, 2015-06-11 This book will be a guide to understanding resistance against targeted therapeutic approaches for cancer using immunotoxins It contains a detailed review of the history and development of targeted therapy As well it includes an in depth description of the molecular and cellular mechanisms involved in cancer resistance and several novel methods to overcome resistance Each chapter discusses different aspects of resistance and covers all the factors that may contribute to resistance in cancer cells Finally this volume highlights the recent findings and advances associated with tackling cancer resistance Antibody-Drug Conjugates and Immunotoxins Gail Lewis Phillips, 2012-12-13 This volume gathers the leading research on antibody drug conjugates and immunotoxins Following a rigorous overview the volume delves into focused sections on all aspects of ADCs and ITs from clinical development through to targeted therapeutic applications and the latest technologies Natural Cytotoxic Substances and Immunoconjugates Aranya Manosroi, Jiradej Manosroi, Chaing Mai University. Faculty of Pharmacy. Department of Pharmaceutical technology, 1992 **Immunology of Malignant Diseases** V.S. Byers, R. W. Baldwin, 2012-12-06 Over the past 5 years clinical immunology as a whole has advanced more rapidly than over the past 20 years Many of these advances have been due to monoclonal antibody technology with its ability to identify antigens on tumour cells with a precision never before available Monoclonal antibodies have the ability to identify subsets of human T lymphocytes and aid in diagnosis of both immunodeficiency disorders such as AIDS or autoimmune diseases and they can be adapted as drug targeting agents Additionally however major advances have been made in identifying immunomodulating agents and the last year has seen two such agents IL 2 and OKT3 made available commercially for such intervention Furthermore another immuno modulating technique bone marrow transplantation has now been established as a curative modality in leukaemia treatment A central issue in tumour immunology is whether human tumours express antigens which can be termed tumour specific This has important implications for both tumour immunity as well as drug targeting This issue is considered in detail by R A Robins in the introductory chapter in which the expression of antigens in human tumours is compared with that in experimentally induced animal tumours This controversial issue is also considered in later chapters by Bast in breast carcinoma Riimke and de Vries in melanoma V mky in lung cancer Armitage in colorectal cancer and Paulie and Perlmann in bladder carcinoma Immunotoxin Cytotoxicity Against Cancer Cells Michael C. hundred or so years since the general concepts were first enuciated by Metchnikoff Ehrlich Von Bebring and others One of the landmarks in this progress was the invention and development of monoclonal antibody secreting hybridomas by Milstein and his co workers in Cambridge Unlike most modern inventions of this importance that of monoclonal antibody production was made available to the scientific community throughout the world unimpeded by patent protection This may explain the unusual rapidity with which it has been applied to the benefit of mankind in general This book representing as it does the proceedings of the first International Symposium to be held on the clinical applications of monoclonal antibodies shows just how much has been achieved within the space of little more than a decade The enormous promise of monoclonal antibody technology which became apparent soon after its discovery has already progressed a long way towards fulfillment The contributors to this volume all of whom are actively engaged in monoclonal antibody development and application represent the state of the art Professor Vincent Marks

V INTRODUCTION It has been some twelve years since the pioneering experiments of Kohler and Milstein led to the discovery of monoclonal antibodies Single molecular species antibodies with desired specificities could be produced by the fusion of antibody producing cells with neoplastic cells

While various treatment approaches for cancer include reversal of the transformed phenotype, stimulation of immune responses, inhibition of metastatic spread, and deprivation of key nutrients, the goal of immunotoxin treatment is the direct killing of malignant cells. Because they are enzymatic proteins that act catalytically to kill cells, bacterial and plant toxins are often employed as the cell-killing component of immunotoxins. Here, we provide background information into the structure-function relationships of toxins and discuss how they can be combined with cell-binding antibodies or other ligands to generate immunotoxins.
