Evidence in the Age of the New Sciences James A.T. Lancaster, Richard Raiswell, 2018-10-24 The motto of the Royal Society Nullius in verba was intended to highlight the members rejection of received knowledge and the new place they afforded direct empirical evidence in their quest for genuine useful knowledge about the world But while many studies have raised questions about the construction reception and authentication of knowledge Evidence in the Age of the New Sciences is the first to examine the problem of evidence at this pivotal moment in European intellectual history What constituted evidence and for whom Where might it be found How should it be collected and organized What is the relationship between evidence and proof These are crucial questions for what constitutes evidence determines how people interrogate the world and the kind of arguments they make about it In this important new collection Lancaster and Raiswell have assembled twelve studies that capture aspects of the debate over evidence in a variety of intellectual contexts From law and theology to geography medicine and experimental philosophy the chapters highlight the great diversity of approaches to evidence gathering that existed side by side in the sixteenth and seventeenth centuries In this way the volume makes an important addition to the literature on early science and knowledge formation and will be of particular interest to scholars and advanced students in these fields

Science For A Polite Society Geoffrey V. Sutton, 2018-02-06 Traditional accounts of the scientific revolution focus on such thinkers as Copernicus Galileo and Newton and usually portray it as a process of steady rational progress There is another side to this story and its protagonists are more likely to be women than men dilettante aristocrats than highly educated natural philosophers The setting is not the laboratory but rather the literary salons of seventeenth and eighteenth century France and the action takes place sometime between Europe s last great witch hunts and the emergence of the modern world Science for a Polite Society is an intriguing reexamination of the social cultural and intellectual context of the origins of modern science The elite of French society accepted science largely because of their personal involvement and fascination with the emerging philosophy of nature Members of salon society especially women were avid readers of works of natural philosophy and active participants in experiments for the edification of their peers Some of these women went on to champion the new science and played a significant role in securing its acceptance by polite society As Geoffrey Sutton points out the sheer entertainment value of startling displays of electricity and chemical explosions would have played an important role in persuading the skeptical We can only imagine the effects of such drawing room experiments on an audience that lived in a world illuminated by tallow candles For many leaping electrical arcs and window rattling detonations must have been as convincing as Newton s mathematically elegant description of the motions of the planets With the acceptance and triumph of the new science came a prestige that made it a model of what rationality should be The Enlightenment adopted the methods of scientific thought as the model for human progress To be an

enlightened thinker meant believing that the application of scientific methods could reform political and economic life to the lasting benefit of humanity We live with the ambiguous results of that legacy even today although in our own century we are perhaps more impressed by the ability of science to frighten rather than to awe and entertain **Art, Animals, and Experience** Elizabeth Sutton, 2017-04-21 Cover Title Copyright Dedication Contents List of Figures List of Color Plates Acknowledgments 1 Relational Ethics and Aesthetics Being and Thinking with Art and Animals Between Presence and Absence An Ethical Art History 2 Dogged Flesh Rembrandt's Presentation in the Temple c 1640 Real and Represented Dogs Rembrandt's Three R's Radical Reflective Revelatory The Rhetoric of Etching Fleshly Experience Past Made Present 3 Glances with Wolves Encounters with Little John and Joseph Beuys Entangled Encounters Seeing and Being with Little John Presencing Other Worlds Imaginative Empathy Gathering Together in the Gap 4 Glimpse into the Unknown Contemporary Taxidermy and Photography Spaces Between Yellow and Taza Respecting Unknowns Dominance Submission and Freedom Inert and Progression of Regression Death and the Object *Ars longa vita brevis est* From Hierarchy to Horizontality 5 We Are All Connected Experiencing Art and Nature at Horseshoe Canyon Guided by Dogs and Children We Are All Connected Dwelling with Dogs and Earth Accessing Histories with Attentive Care Art and Earth as Places of Emergence 6 Caring for Art and Animals Bibliography Index *The Philosophical Writings of Descartes: Volume 1* René Descartes, 1984 A completely new translation of the works of Descartes is intended to replace the Haldane and Ross edition first published in 1911 All material from that edition is translated here with a number of other texts crucial for understanding Cartesian philosophy
