Discovering Washington Dc Pb 2001:

Pattern Detection and Discovery David J Hand, Niall, M. Adams, Richard J. Bolton, 2003-08-02 The collation of large electronic databases of scientific and commercial information has led to a dramatic growth of interest in methods for discovering structures in such databases These methods often go under the general name of data mining One important subdiscipline within data mining is concerned with the identification and detection of anomalous interesting unusual or valuable records or groups of records which we call patterns Familiar examples are the detection of fraud in credit card transactions of particular coincident purchases in supermarket transactions of important nucleotide sequences in gene sequence analysis and of characteristic traces in EEG records Tools for the detection of such patterns have been developed within the data mining community but also within other research communities typically without an awareness that the same problem was common to many disciplines This is not unreasonable each of these disciplines has a large literature of its own and a literature which is growing rapidly Keeping up with any one of these is difficult enough let alone keeping up with others as well which may in any case be couched in an unfamiliar technical language But of course this means that opportunities are being lost discoveries relating to the common problem made in one area are not transferred to the other area and breakthroughs and problem solutions are being rediscovered or not discovered for a long time meaning that effort is being wasted and opportunities may be lost

Sharer, 2009-04-22 This brief inexpensive introduction to the techniques methods and theoretical frameworks of contemporary archaeology follows the same organizing principle as the text *Archaeology Discovering Our Past* but features less detail Archaeological methods and theory are covered comprehensively at a reasonable level of detail in under 300 pages Illustrative examples and case studies present a temporal and geographic balance of both Old and New World sites Abundant student aids include maps of archaeological areas extensive illustrations chapter introductions and summaries a guide to further reading at the end of each chapter a glossary a bibliography and an index

Pseudo-peptides in Drug Discovery Peter E. Nielsen, 2006-03-06 Peptides are among the most versatile bioactive molecules yet they do not make good drugs because they are quickly degraded or modified in the body To overcome this problem stable and at the same time biologically active pseudo peptides have been developed These novel compounds open up new perspectives in drug design by providing an entire range of highly specific and non toxic pharmaceuticals This is the first work devoted to the topic and draws together knowledge gained on different types of peptidomimetics and other pseudo peptides with drug properties As such it includes peptoids beta peptides polyamide DNA binders as well as peptide nucleic acids The expert authors and editor discuss chemical properties and stability biological activity and reactivity as well as practical aspects of synthesis making this

Myers, 2004-12-07 The success of the modular version of David Myers's bestselling brief text Exploring Psychology proves the author's longheld belief supported by independent research that for a number of students a text comprised of 45 15 page chapters is more effective than one of 15 45 page chapters Exploring Psychology Sixth Edition in Modules includes all the features and up to date content of the current edition of Exploring Psychology organized into 45 modules It is accompanied by its own expansive variety of media and supplements similar to the Exploring Psychology package also reorganized to match the modular format This is NOT a brief version of Psychology Seventh Edition in Modules Rather this text is a MODULARIZED version of Exploring Psychology Sixth Edition

Discovery of Non-steroidal Glucocorticoid Receptor Ligands Nilesh Dinbandhu Shah, 2006 Endogenous glucocorticoids such as cortisol and cortisone are endocrine mediators of a myriad of essential physiological processes and analogs of these hormones have been employed clinically for over fifty years as potent anti-inflammatory agents Coincident participation in other signalling pathways gives rise to many undesired side effects leaving extended use as a last resort Drug development efforts to dissociate desired and unwanted glucocorticoid effects have been pursued since the beginning of clinical use and while progressive deconvolution of the complexity of glucocorticoid action has offered somewhat better drugs minimization of side effects remains limited in practice A structure based ligand design approach was undertaken to develop dissociating non-steroidal glucocorticoid analogs The first step was to generate a homology model of the glucocorticoid receptor ligand binding domain which was validated through free energy calculations This was followed by in silico screening of a virtual compound library based on a Wieland Miescher ketone derived scaffold Two series of compounds were synthesized the first incorporating the 3 carbonyl function of cortisol and in the other this moiety was replaced by a fused 4-fluorophenyl pyrazole These compounds were characterized against canonical response elements in mammalian cell lines with reporter gene assays The arylpyrazole compounds proved to be high affinity selective glucocorticoid receptor ligands and a subset of these were found to dissociate transrepression from transactivation in vitro **Discovering**
