Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1975 *Computational Analysis of One-dimensional Cellular Automata* Burton H. Voorhees, 1996 Cellular automata provide an interesting avenue into the study of complex systems in general as well as having an intrinsic interest of their own Because of their mathematical simplicity and representational robustness they have been used to model economic political biological ecological chemical and physical systems Almost any system which can be treated in terms of a discrete representation space in which the dynamics is based on local interaction rules can be modelled by a cellular automata The aim of this book is to give an introduction to the analysis of cellular automata CA in terms of an approach in which CA rules are viewed as elements of a nonlinear operator algebra which can be expressed in component form much as ordinary vectors are in vector algebra Although a variety of different topics are covered this viewpoint provides the underlying theme The actual mathematics used is not complicated and the material should be accessible to anyone with a junior level university background and a certain degree of mathematical maturity Generalized Fractional Order Differential Equations Arising in Physical Models Santanu Saha Ray, Subhadarshan Sahoo, 2018-11-13 This book analyzes the various semi analytical and analytical methods for finding approximate and exact solutions of fractional order partial differential equations It explores approximate and exact solutions obtained by various analytical methods for fractional order partial differential equations arising in physical models

Monographic Series Library of Congress, *Semi-Markov Migration Models for Credit Risk* Guglielmo D'Amico, Giuseppe Di Biase, Jacques Janssen, Raimondo Manca, 2017-05-24 Credit risk is one of the most important contemporary problems for banks and insurance companies Indeed for banks more than forty percent of the equities are necessary to cover this risk Though this problem is studied by large rating agencies with substantial economic social and financial tools building stochastic models is nevertheless necessary to complete this descriptive orientation This book presents a complete presentation of such a category of models using homogeneous and non homogeneous semi Markov processes developed by the authors in several recent papers This approach provides a good method of evaluating the default risk and the classical VaR indicators used for Solvency II and Basel III governance rules This book is the first to present a complete semi Markov treatment of credit risk while also insisting on the practical use of the models presented here including numerical aspects so that this book is not only useful for scientific research but also to managers working in this field for banks insurance companies pension funds and other financial institutions *New Technical Books* New York Public Library, 1974 *Computational Methods in Applied Mathematics*, 2005 **Computational Probability and Simulation** Sidney J.
