**The Discrete Series of  $GL_n$  Over a Finite Field** George Lusztig, 1974-10-21 In this book Professor Lusztig solves an interesting problem by entirely new methods specifically the use of cohomology of buildings and related complexes The book gives an explicit construction of one distinguished member  $DV$  of the discrete series of  $GL_n F_q$  where  $V$  is the  $n$  dimensional  $F$  vector space on which  $GL_n F_q$  acts This is a  $p$  adic representation more precisely  $DV$  is a free module of rank  $q - 1$  over the ring of Witt vectors  $W(F)$  of  $F$  In Chapter 1 the author studies the homology of partially ordered sets and proves some vanishing theorems for the homology of some partially ordered sets associated to geometric structures Chapter 2 is a study of the representation of the affine group over a finite field In Chapter 3  $DV$  is defined and its restriction to parabolic subgroups is determined In Chapter 4 the author computes the character of  $DV$  and shows how to obtain other members of the discrete series by applying Galois automorphisms to  $DV$  Applications are in Chapter 5 As one of the main applications of his study the author gives a precise analysis of a Brauer lifting of the standard representation of  $GL_n F_q$
