Methods for Studying Language Production Lise Menn, Nan Bernstein Ratner, 1999-10 In this volume language researchers studying morphosyntax the lexicon and pragmatics share and evaluate methods of eliciting and analyzing language production in various populations and settings For all language researchers applied and theoretical

Multi-Layered Transcription Müller, Nicole , 2005-11-01 This book is designed as a course in the phonetic transcription of normal and disordered speech What differentiates this book from existing approaches to phonetic transcription and conversational analysis is that it concentrates on linking together layers of detail to result in a complete record for the entire range of transcribable behaviors Müller's book represents the first attempt to amalgamate differing methods to give phoneticians and clinicians a transcriptional tool kit thus allowing them to generate a rich description of their data This approach results in a variety of layers of transcription all or some of which are available to the clinician or researcher faced with the task of transcribing speech The layers include a base orthographic layer segmental and suprasegmental phonetic layers a gaze and gesture layer a layer for marking aspects of discourse e g overlap and finally a layer for highlighting behaviors of specific clinical interest e g stuttering behavior This book clearly lays out the various layers of transcription in this approach illustrating them with normal and clinical data as well as exercises for the reader Each chapter in the book addresses a different layer of transcription with a final chapter illustrating how to bring the layers together Worked examples accompany each chapter and appendices provide a quick reference to symbols and transcription conventions Clinicians who need to transcribe speech samples for diagnosing disorders planning treatment and measuring treatment efficacy milestones will value that added precision available from use of the upgraded transcription techniques elucidated in this book

Analyzing Discourse in Communicatively Impaired Adults Leora Reiff Cherney, Carl A. Coelho, Barbara Bennett Shadden, 1998 Since discourse analysis is a relatively new area there is no consensus as to the types of discourse that should be elicited or the methods of analysis that should be applied This book demonstrates a different way of analyzing discourse along with step by step guidelines and extensive exhibits to illustrate the analysis Evaluation and treatment are included throughout the chapters Message Production John O. Greene, 2013-11-05 The last two decades have seen the development of a number of models that have proven particularly important in advancing understanding of message production processes Now it appears that a second generation of theories is emerging one that reflects considerable conceptual advances over earlier models *Message Production Advances in Communication Theory* focuses on these new

developments in theoretical approaches to verbal and nonverbal message production The chapters reflect a number of characteristics and trends resident in these theories including the nature and source of interaction goals the impact of physiological factors on message behavior the prominence accorded conceptions of goals and planning attempts to apply models of intra individual processes in illuminating inter individual phenomena treatments which involve hybrid intentional design stance approaches and efforts to incorporate physiological constructs and to meld them with psychological and social terms The processes underlying the production of verbal and nonverbal behaviors are exceedingly complex so much so that they resist the development of unified explanatory schemes The alternative is the mosaic of emerging theories such as are represented in this book each approach according prominence to certain message production phenomena while obscuring others and providing a window on some portion of the processes that give rise to those phenomena while remaining mute about other processes The amalgam of these disparate treatments then becomes the most intellectually compelling characterization of message production processes

Journal of Narrative and Life History ,1994 Right Hemisphere Language Comprehension Mark Jung Beeman,Christine Chiarello,2013-02-01 The statement The Right Hemisphere RH processes language while not exactly revolutionary still provokes vigorous debate It often elicits the argument that anything the RH does with language is not linguistic but paralinguistic The resistance to the notion of RH language processing persists despite the fact that even the earliest observers of Left Hemisphere LH language specialization posited some role for the RH in language processing and evidence attesting to various RH language processes has steadily accrued for more than 30 years In this volume chapters pertain to a wide but by no means exhaustive set of language comprehension processes for which RH contributions have been demonstrated The sections are organized around these processes beginning with initial decoding of written or spoken input proceeding through semantic processing of single words and sentences up to comprehension of more complex discourse as well as problem solving The chapters assembled here should begin to melt this resistance to evidence of RH language processing This volume s main goal is to compile evidence about RH language function from a scattered literature The editorial commentaries concluding each section highlight the relevance of these phenomena for psycholinguistic and neuropsychological theory and discuss similarities and apparent discrepancies in the findings reported in individual chapters In the final chapter common themes that emerge from the enterprise of studying RH language and future challenge for the field are reviewed Although all chapters focus only on typical laterality of right handed people this work provides a representative sample of the current state of the art in RH language research Important features include a wide range of coverage from speech perception and reading through complex discourse comprehension and problem solving research presented from both empirical and theoretical perspectives and commentaries and conclusions integrating findings and theories across sub domains and speculating on future directions of the field
