Discovering Plants:

Exploring Plants Rebecca Olien, 1997 Provides hands on activities for children to observe experiment and respond to plants

Discovering Wild Plants Janice J. Schofield, Janice Schofield Eaton, 1989 More than 130 plants including trees roots wildflowers herbs seaweed and mushrooms from Alaska Yukon Territory through western Canada to Washington Oregon and northern California are profiled Information provided includes precise botanical identification history New and Old World folk uses harvest and habitat information and recipes

Discovering Nature with Young Children Ingrid Chalufour, Karen Worth, 2003-11-17 Field tested across the country this comprehensive curriculum expands and extends the role science has traditionally played in the early childhood classroom The first in a new series Discovering Nature with Young Children explores the wide ranging elements that make up the natural world around us The curriculum replaces simple fact feeding practices with the development of long term scientific reasoning including literacy skills and numeracy skills such as hypothesis inference prediction and estimation

Plant-Based Drug Discovery Mamta Bisht, Ajay Singh, Akhileshwar Kumar Srivastava, 2025-09-01 Plant Based Drug Discovery Unveiling Molecular Targets for Metabolic Conditions provides an in depth examination of the molecular mechanisms of phytochemicals and their potential in treating metabolic diseases This comprehensive guide begins with an introduction to the prevalence and impact of metabolic disorders emphasizing the significant role of phytochemicals in their management The book delves into scientific concepts and research findings offering valuable insights for researchers and healthcare professionals in the fields of molecular biology biochemistry pharmacology and biotechnology Chapters cover various crucial topics such as oxidative stress epigenetic mechanisms and mitophagy In addition they explore the targeting of molecular chaperones and the molecular targets of plant nutraceuticals for treating obesity cardiovascular disease and type 2 diabetes The book also addresses technological advances including AI and nanotechnology highlighting opportunities and challenges in improving the use of plant molecules for metabolic disorder treatments It serves as an essential resource for those engaged in drug discovery and related areas Considers the therapeutic application of phytochemicals for the treatment of metabolic diseases including cardiovascular disease obesity and type 2 diabetes Explores phytochemicals at the molecular level covering signaling pathways of oxidative stress mitophagy inflammasomes molecular chaperones receptors and how these mechanisms can be used to treat diseases Discusses the use of artificial intelligence and high throughput omics technologies in plant based drug discovery

Drug Discovery and Design Using Natural Products Jorddy Neves Cruz, 2023-08-28 Historically natural products have great relevance for the development of new drugs Natural molecules in addition to directly providing new compounds with different therapeutic functions have provided scaffolds and a great diversity of structures that serve as inspiration for the design and discovery of new drugs The great structural complexity and the significant number of natural compounds that can be obtained and their advantages also present some historical problems that need to be overcome Issues such as difficulty in

isolation difficulty in synthesizing compounds found in nature in the laboratory screening to evaluate the biological properties of these compounds and structural optimization to enhance the pharmacological properties of biomolecules are some of the main difficulties encountered in research with natural products and in the design discovery of new medicines Therefore this book addresses the great scientific advances that provide practical solutions to using natural products to develop new drugs We address topics related to the genesis of research projects that use natural products to design new drugs We address the discovery of new species initial processes for identification and extraction of compounds isolation and identification of these structures techniques and advances in vitro and in vivo methods that support the discovery of new natural drugs synthesis of new compounds from natural molecules in silico optimization processes of potentially promising compounds

Ethnomedicinal Plants for Drug Discovery Akhileshwar Kumar Srivastava, Ramesh Kumar Ahirwar, Deepanker Yadav, D. Guru Kumar, 2024-09-01 This book explains the translational aspects of ethnomedicinal plants of different geographical regions including India by explaining the medicinal properties against several diseases genomic evolution in changing environments metabolic profiling for biomarker discovery the role of non coding RNA in the synthesis of secondary metabolites genome wide transcriptome profiling application of pluripotent stem cells for drug discovery the importance of high throughput omics and genome editing techniques In addition some of the chapters have been designed to describe the role of artificial intelligence plant database and network based drug discovery to explore the medicinal importance of compounds as well as challenges and opportunities in drug discovery from ethnomedicinal plants The book serves as a great source of information for the students researchers scientists of diverse fields such as pharmacognosy plant physiologists biotechnologists and pharmaceutical scientists etc working in the areas of phytotherapy from ethnomedicinal plants

Oxford Primary Science Terry Jennings, 1994 **Plant Spirit Reiki** Fay Johnstone, 2020-09-22 Enrich your Reiki practice by connecting with the healing spirit of plants and the natural world Explores a new way of channeling Reiki energy for both personal healing and professional practice by intuitively connecting with plants and the natural world Provides simple exercises meditations and Reiki practices to help the reader intuitively work in partnership with plants as part of their Reiki practice Emphasizes healing exchange with plants and the self practice of Reiki in partnership with the spirit of plants to heal our essential nature Explains how to raise the vibration of your community and the world by connecting with green spaces nature beings and habitats under threat In this practical workbook Fay Johnstone demonstrates how energy healers and Reiki practitioners can partner with plant spirit allies and the forces of nature for powerful healing for themselves others and our planet She explains how to include plants and nature in your Reiki practice both the spiritual etheric components of plants and the physical plants themselves She offers many practical exercises techniques and meditations as well as case studies and personal experiences to show how best to harness the power of plants on all levels along with other energy flows to support the healing process in much the same way that crystals are used as energetic healing aids She explains how plants

connect with the Reiki principles and explores plant spirit allies chakra work and healing with the elements of nature She details how to enhance self healing and Reiki treatments for others through bringing the outside in creating a healing space use of plant preparations and other sacred forms of plant medicine Fay also explores how to support the healing of plants and nature itself through your Reiki healing practice She provides guidance on how to raise the vibration of your home and community how to impact nature positively with regard to climate change and how to send distance healing to the Earth nature beings and endangered habitats across the world She inspires you to reach out to the vital force that flows through the natural world and open your intuition to discover guidance and support from nature By deepening our conscious cooperation and partnership with nature and the plant kingdom in a sacred healing way we come to recognize that in healing ourselves we are also healing our Earth

Bioactive Phytochemicals: Drug Discovery to Product Development Javed Ahmad, Javed Ahmad, 2020-10-28 Natural bioactive compounds from medicinal plants are inexplicably diverse in chemical structure and biological properties The unmet therapeutic requirements for various diseases serve as a guide for researchers to study natural compounds These studies are intended to isolate identify the structural characterization and eventually discover the pharmacological activity of natural compounds from their plant sources with the goal of treating specific diseases Bioactive Phytochemicals Drug Discovery to Product Development explores the scope and approaches of drug discovery from natural products Chapters in the book cover information about the cultivation collection and processing of medicinal plants the methods and high throughput techniques for isolation and characterization of bioactive phytochemicals and pharmacological screening for activity formulation and quality control Information about the regulations specified for natural medicinal products in different region of the world is also presented followed by a concluding chapter devoted to the role of natural herbal products for treatment of human diseases such as cancer cardiovascular diseases diabetes obesity inflammation and neurological disorders Each chapter concludes with a general reference section which is a bibliographic guide to more advanced texts The contributing authors for this volume are drawn from a rich blend of experts in various areas of herbal medicine which encompass herbal drug discovery to product development The concise and organized layout along with a broad coverage of phytochemistry and drug discovery makes this book a suitable reference for students of medicinal chemistry researchers and industry professionals interested in herbal product development

Beyond borders: exploring diverse roles of heterocyclic compounds in combatting infections and cancer Afzal Basha Shaik, Richie Bhandare, Mukhlesur Rahman, Kamal Dua, 2025-04-01 There is an urgent need for the discovery of new drugs against infectious diseases and cancer Globally infectious diseases are prevalent with pathogens constantly evolving leading to a rise in drug resistant strains This necessitates the development of new antimicrobial agents capable of overcoming resistance Moreover the COVID 19 pandemic highlighted the critical need for rapid drug development against emerging infectious diseases Cancer a leading cause of death worldwide presents challenges due to its complexity and diversity and the unique

genetic profiles of patients The American Cancer Society notes increasing cancer rates underscoring the need for more effective targeted therapies In this context heterocyclic compounds in natural and medicinal chemistry are promising for their structural diversity and reactivity showing potential in treating infections and cancer by targeting specific cell lines and pathways This Research Topic focuses on the advancements and applications of heterocyclic compounds emphasizing their significance in modern medicinal chemistry The goal is to delve into the multifaceted applications of heterocyclic compounds in addressing two of the most pressing health challenges infectious diseases and cancer The core issue this research addresses is the increasing resistance to traditional treatments in infectious diseases and the intricacies of cancer treatment complicated by its genetic diversity and adaptability To tackle these issues this Research Topic aims to gather and showcase cutting edge research on the isolation design synthesis and application of heterocyclic compounds Heterocyclic compounds are known for their structural diversity and unique biological properties offering promising avenues for developing novel therapeutics Recent advances in this field have demonstrated the potential of heterocyclic compounds to produce more targeted and effective treatments with fewer side effects By collating research on novel heterocyclic compounds their mechanisms of action and their clinical applications this Research Topic seeks to contribute to the development of next generation drugs It aims to foster a deeper understanding of how these compounds interact with biological systems overcome resistance mechanisms in pathogens and target specific pathways in cancer cells The ultimate aim is to advance medicinal chemistry and pharmacology leading to novel treatments for infectious diseases and cancer This Research Topic aims to collect important advancements made in the field of medicinal and natural product chemistry including the isolation design synthesis and applications of potential heterocyclic compounds as potential anti infective and anticancer agents We welcome Original Research Review Mini Review and Perspective articles on themes including but not limited to Heterocyclic compounds with potential anti infective and anticancer properties Bioactivity guided isolation and characterization of heterocyclic secondary metabolites from natural sources with potential anti infective and anticancer properties Semi synthesis and characterization of novel heterocyclic compounds with significant anti infective and anticancer activity Design and synthesis of promising anti infective and anticancer lead molecules using medicinal synthetic and computational chemistry approaches
