Discrete-Event Simulation George S. Fishman, 2013-03-09 Discrete event simulation consists of a collection of techniques that when applied to a discrete event dynamical system generates sequences called sample paths that characterize its behavior The collection includes modelling concepts for abstracting the essential features of a system using specially designed software for converting these relationships into computer executable code

capable of generating the requisite sample path data outlining procedures for converting these data into estimates of systems performances and then illustrating methods for assessing how well these estimates approximate true but unknown system behavior This book is intended for upper level undergraduate and graduate students in operations research and management science mathematics industrial engineering computer science and business and features extensive exercises throughout This concept of modelling complex systems allows a relatively low cost way of gathering information for decision making Principally offered are four problems for student exercises each is progressively brought forward through the modelling programming and analysis chapters providing continuity to the learning process

Discrete-Event Simulation George Fishman, 2013-01-07 This is an excellent and well written text on discrete event simulation with a focus on applications in Operations Research There is substantial attention to programming output analysis pseudo random number generation and modelling and these sections are quite thorough Methods are provided for generating pseudo random numbers including combining such streams and for generating random numbers from most standard statistical distributions ISI Short Book Reviews 22 2 August 2002

Operations Research Proceedings 1996 Uwe Zimmermann, Ulrich Derigs, Wolfgang A. Gaul, Rolf H. Möhring, Karl-Peter Schuster, 1997-05-27 The volume contains a selection of manuscripts of lectures presented at the International Symposium on Operations Research SOR 96 The Symposium took place at the Technical University of Braunschweig September 3-6 1996 SOR 96 was organized under the auspices of the two German

societies of Operations Research Deutsche Gesellschaft für Operations Research DGOR and Gesellschaft für Mathematik Ökonomie und Operations Research GMOOR in cooperation with the Working Group Discrete Optimization of the IFIP WG7.4 Since 1995 DGOR and GMOOR jointly prepare the Symposium as a common annual conference. In particular the annual general meetings of the DGOR, the GMOOR and the WG7.4 took place during the conference. The Symposium had 527 participants from 32 countries around the world including 92 participants from Eastern Europe. The Symposium obviously attracts an international audience of workers fully covering the broad spectrum of Operations Research and related areas in economics, mathematics and computer science. The importance of a highly interdisciplinary field as Operations Research is increasing owing to the growth in applications in related disciplines. Technological advances in computer science and algorithmic mathematics are crucial for attacking the great challenges waiting in the areas of applications of Operations Research effectively. As a participant of SOR 96 one could well observe the current pace of achievements. Many of these results are in these proceedings. The program consisted of two plenary, 17 semi-plenary and 335 contributed lectures in 18 sections. **Mathematical Reviews**, 2002 **UCSF General Catalog** University of California, San Francisco, 1976

Bayreuther mathematische Schriften, 2005 *Acta Scientiarum Mathematicarum* József Attila Tudományegyetem, 1997 *Algebraic Integrability of Nonlinear Dynamical Systems on Manifolds* A.K. Prykarpatsky, Igor' Vladimirovich Mikitiuk, 1998-06-30. Noting that their research is not yet completed, Prykarpatsky (mathematics, U of Mining and Metallurgy Cracow, Poland) and mechanics and mathematics NAS Lviv, Ukraine) and Mykytiuk (mechanics and mathematics NAS and Lviv Polytechnic State U, Ukraine) describe some of the ideas of Lie algebra that underlie many of the comprehensive integrability theories of nonlinear dynamical systems on manifolds. For each case they analyze, they separate the basic algebraic essence responsible for the complete integrability and explore how it is also in some sense characteristic for all of them. They cover systems with homogeneous configuration spaces, geometric quantization structures on manifolds, algebraic methods of quantum statistical mechanics and their applications, and algebraic and differential geometric aspects related to infinite dimensional functional manifolds. They have not indexed their work. **Nieuw Archief Voor Wiskunde**, 1998
