Discrete Time Dynamic Models:

Discrete-time Dynamic Models Ronald K. Pearson, 1999 Fueled by advances in computer technology model based approaches to the control of industrial processes are now widespread While there is an enormous literature on modeling the difficult first step of selecting an appropriate model structure has received almost no attention This book fills the gap providing practical insight into model selection for chemical processes and emphasizing structures suitable for control system design

Time Series Modeling of Neuroscience Data Tohru Ozaki, 2012-01-26 Recent advances in brain science measurement technology have given researchers access to very large scale time series data such as EEG MEG data 20 to 100 dimensional and fMRI 140 000 dimensional data To analyze such massive data efficient computational and statistical methods are required Time Series Modeling of Neuroscience Data shows how to

Dynamic Modelling of Time-to-Event Processes Gangaram S. Ladde, Emmanuel A. Appiah, Jay G. Ladde, 2025-10-20 Dynamic Modelling of Time to Event Processes covers an alternative dynamic modelling approach for studying time to event processes This innovative approach covers some key elements including the Development of continuous time state of dynamic time to event processes an Introduction of an idea of discrete time dynamic intervention processes Treating a time to event process operating functioning under multiple time scales formulation of continuous and discrete time interconnected dynamic system as hybrid dynamic time to event process Utilizing Euler type discretized schemes developing theoretical dynamic algorithms and more Additional elements of this process include an Introduction of conceptual and computational state and parameter estimation procedures Developing multistage a robust mean square suboptimal criterion for state and parameter estimation and Extending the idea conceptual computational simulation process and applying real datasets Presents a dynamic approach which does not require a closed form survival reliability distribution Provides updates that are independent of existing Maximum likelihood Bayesian and Nonparametric methods Applies to nonlinear and non stationary interconnected large scale dynamic systems Includes frailty and other models in survival analysis as case studies

Process Dynamics and Control Dale E. Seborg, Duncan A. Mellichamp, Thomas F. Edgar, Francis J. Doyle, III, 2010-04-12 This third edition provides chemical engineers with process control techniques that are used in practice while offering detailed mathematical analysis Numerous examples and simulations are used to illustrate key theoretical concepts New exercises are integrated throughout several chapters to reinforce concepts Up to date information is also included on real time optimization and model predictive control to highlight the significant impact these techniques have on industrial practice And chemical engineers will find two new chapters on biosystems control to gain the latest perspective in the field
