**The Syntax of Negation and the Licensing of Negative Polarity Items in Hindi** Rajesh Kumar, 2013-10-15 This book studies syntax of NPIs and their interaction with sentential negatives in Hindi It outlines the clause structure of Hindi and locates the syntactic position of sentential negatives as well as constituent negatives within the structure It is argued that sentential negative in Hindi negation marker heads its own maximal projection NegP which is immediately dominated by TP In addition to locating the position of negation markers in the clause structure it outlines the distribution of negative polarity items NPIs in Hindi and the structural constraints on their licensing by sentential negative The book argues that an NPI in Hindi is licensed overtly in the course of derivation by a c commanding negative marker The bulk of the evidence presented in this book argues against previous theoretical accounts that claim that NPI licensing involves covert syntactic operations such as LF movement or reconstruction With respect to the classification of NPIs this book also shows the existence of two different types of NPIs in Hindi namely strong NPIs and weak NPIs Strong NPIs require a clause mate c commanding negative licenser whereas weak NPIs are quantifiers and are similar to free choice any in English that are interpreted as NPIs in the presence of a c commanding negative licenser

Proceedings of the Conferences and Proceedings of the ANLP-NAACL 2000 Student Research Workshop Association for Computational Linguistics North American Chapter,2000 **Focus on Computational Neurobiology** Lei Li,2004 The most distinctive feature in the development of information science and life science is the gradual and growing interlacing of these two fields As a result many new disciplines and technologies have emerged from the overlap of these two areas of science Today information science and life science depend on each other so closely that they can no longer exist and grow independently The interaction and interdependence between the information and life sciences is expected to grow exponentially in the 21st century Development of the life sciences based on information science and computation will reveal many significant challenges in the life sciences as well as lead to many new and important discoveries including targeted and breakthrough drugs Application of these discoveries extends to such areas as biotechnology genomics proteomics e health pharmaceuticals and the agricultural sciences Contents Preface Applications of Smoothing Methods in Numerical Analysis and Optimisation Stochastic Programming Models for Vehicle Routing Problems An Improved Iterative Criterion for GDDM with Elective Parameters Higher order Asymptotic Theories of the Jackknife in a Multivariate *AI Magazine* ,1992 **The Artificial Intelligence Compendium: Abstracts II** ,1988
