Discriminant Analysis And Class Modelling Of Spectroscopic Data:

Discriminant Analysis and Class Modelling of Spectroscopic Data E. K. Kemsley, 1998-12-30 This unique book and software package Win DAS is both an introduction to discriminant analysis and class modelling and a powerful tool for analysis of the user's own spectroscopic data. The software includes worked examples based on real data sets including distinguishing between different types of coffee and species identification in fruit pulps. By reading the book and working through these tutorials the user will become familiar with the following chemometrics methods: principal component analysis, PCA, partial least squares, PLS for discriminant analysis, linear discriminant analysis, LDA, and canonical variate analysis, CVA. The class modelling methods of UNEQ, UNEQUAL dispersed classes, and SIMCA Soft Independent Modelling of Class Analogy. The software also allows users to input their own data and can be installed on any PC connected to a spectrometer for easy and direct transfer of files. This versatile software package can be used in any situation which requires analysis of a large number of spectra, with many examples in the tutorials taken from the author's own field of expertise, food science. System requirements for the Win DAS software are: CD-ROM drive, Microsoft Windows 3.1 or 95, a mouse compatible with Windows 3.1 or 95, a colour monitor with VGA 640x480 or SVGA 800x600 resolution and approximately 5Mb of available hard drive space. A spreadsheeting and graphing package such as Microsoft Excel is also useful.

Raman Spectroscopy Applied to Polymer Composites and Nanocomposites Sabu Thomas, Isabelle Royaud, David Chapron, Marc Ponçot, 2025-11-28 Raman Spectroscopy Applied to Polymer Composites and Nanocomposites summarizes in a comprehensive manner recent research accomplishments in this important area. The book offers an in-depth study of the current state of the art, covering the fundamentals and recent experimental developments. Almost all the characterization techniques coupled in situ with Raman spectroscopy are discussed in detail. The book also covers various aspects of polymer applications as well as related topics in polymer composites and nanocomposites. Filled polymers, reinforced plastics, thermoplastics, thermosets, elastomers, and rubbers are also discussed. The book is designed to address all aspects of Raman spectroscopy with respect to polymers and measurements along with experimental conditions. It contains numerous case study examples to illustrate how Raman spectroscopy coupled in situ with more classical techniques can be useful to enhance material performance. Deals with recent advances in the Raman spectroscopy of polymers and composites with in situ coupling techniques. Discusses almost all analytical techniques. Focuses on the engineering of high performance polymer based nanocomposites. Assists in solving fundamental and applied problems in the development of materials using illustrated case study examples. Provides an up to date record on major research findings and observations in the processing of polymers and composites and various applications in biomedical imaging and chemometrics settings.

Advanced Spectroscopic Techniques for Food Quality Ashutosh Kumar Shukla, 2022-05-20 The use of spectroscopy in food analysis is growing and this informative volume presents the application of advanced spectroscopic techniques in the analysis of food quality. The spectroscopic techniques include

visible and NIR spectroscopy FTIR spectroscopy and Laser induced Breakdown Spectroscopy LIBS A wide range of food and beverage items are covered including tea coffee and wine The chapters will highlight the potential of spectroscopic techniques to enrich the food quality analysis experience when coupled with artificial intelligence and machine learning and provide a good opportunity to assess and critically lay out any future prospects Different chapters have been written using a bottom up approach that suits the needs of novice researchers and at the same time offers a smooth read for professionals The book will also be of use to those developing spectroscopic facilities providing a useful cross comparison of the various techniques

Handbook of Spectroscopy Günter Gauglitz, David S. Moore, 2014-05-05 This second thoroughly revised updated and enlarged edition provides a straightforward introduction to spectroscopy showing what it can do and how it does it together with a clear integrated and objective account of the wealth of information that may be derived from spectra It also features new chapters on spectroscopy in nano dimensions nano optics and polymer analysis Clearly structured into sixteen sections it covers everything from spectroscopy in nanodimensions to medicinal applications spanning a wide range of the electromagnetic spectrum and the physical processes involved from nuclear phenomena to molecular rotation processes In addition data tables provide a comparison of different methods in a standardized form allowing readers to save valuable time in the decision process by avoiding wrong turns and also help in selecting the instrumentation and performing the experiments These four volumes are a must have companion for daily use in every lab
