Diseases And Human Evolution:

Diseases and Human Evolution Ethne Barnes, 2007-02-16 Urgent interest in new diseases such as the coronavirus and the resurgence of older diseases like tuberculosis has fostered questions about the history of human infectious diseases How did they evolve Where did they originate What natural factors have stalled the progression of diseases or made them possible How does a microorganism become a pathogen How have infectious diseases changed through time What can we do to control their occurrence Ethne Barnes offers answers to these questions using information from history and medicine as well as from anthropology She focuses on changes in the patterns of human behavior through cultural evolution and how they have affected the development of human diseases Writing in a clear lively style Barnes offers general overviews of every variety of disease and their carriers from insects and worms through rodent vectors to household pets and farm animals She devotes whole chapters to major infectious diseases such as leprosy syphilis smallpox and influenza Other chapters concentrate on categories of diseases gut bugs for example including cholera typhus and salmonella The final chapters cover diseases that have made headlines in recent years among them mad cow disease West Nile virus and Lyme disease In the tradition of Berton Rouech Hans Zinsser and Sherwin Nuland Ethne Barnes answers questions you never knew you had about the germs that have threatened us throughout human history

Evolution in Health and Disease Stephen C. Stearns, Jacob C. Koella, 2008 This work explores and analyses the ways in which our ancient genes contend with and influence modern human life It offers coverage of the points of contact between evolutionary biology and medical science

Evolving Health Noel T. Boaz, 2002-10-01 Human illnesses can be understood as damage to those adaptations that we took on at various stages in our evolution from pre life molecules to modern Homo sapiens Preventing these illnesses entails avoiding what causes the damage which too frequently are the everyday hazards of twenty first century life as the chart below shows Level of Evolution Cause of adaptive failure resulting disease or problem Pre life Environmental poisons Certain birth defects Single cell bacteria and amoeba like Viral infection Colds flu HIV Morula sponge like Cellular stress Cancer Chordate Physical stress Back pain Fish Excess dietary salt Hypertension heart disease Amphibian

The Story of the Human Body Daniel E. Lieberman, 2014-07-01 A landmark book of popular science that gives us a lucid and engaging account of how the human body evolved over millions of years with charts and line drawings throughout Fascinating A readable introduction to the whole field and great on the making of our physicality Nature In this book Daniel E Lieberman illuminates the major transformations that contributed to key adaptations to the body the rise of bipedalism the shift to a non fruit based diet the advent of hunting and gathering and how cultural changes like the Agricultural and Industrial Revolutions have impacted us physically He shows how the increasing disparity between the jumble of adaptations in our Stone Age bodies and advancements in the modern world is occasioning a paradox greater longevity but increased chronic disease And finally provocatively he advocates the use of evolutionary information to help nudge push and sometimes even compel us to create a more salubrious environment and pursue better lifestyles

Infections Disease and Host-pathogen Evolution

Krishna R. Dronamraju, 2004 It has long been recognised that an important factor in human evolution has been the struggle against

infectious disease and more recently it has been revealed that complex genetic polymorphisms are the direct result of that struggle. As molecular biological techniques become more sophisticated, a number of breakthroughs in the area of host pathogen evolution have led to an increased interest in this field. From the historical beginnings of J. B. S. Haldane's original hypothesis to current research, this book strives to evaluate infectious diseases from an evolutionary perspective. It provides a survey of the latest information regarding host pathogen evolution related to major infectious diseases and parasitic infections including malaria, influenza, and leishmaniasis. Written by leading authorities in the field and edited by a former pupil of Haldane, *Infectious Disease and Host Pathogen Evolution* will be a valuable reference for those working in related areas of microbiology, parasitology, immunology, and infectious disease medicine, as well as genetics, evolutionary biology, and epidemiology.

Principles of Evolutionary Medicine Peter D. Gluckman, Alan Beedle, Tatjana Buklijas, Felicia Low, Mark A. Hanson, 2016. Human iPSC-derived Disease Models for Drug Discovery Markus H. Kuehn, Wei Zhu, 2023-11-23. Since their development a decade ago, human induced pluripotent stem cells (iPSC) have revolutionized the study of human disease, given rise to regenerative medicine technologies, and provided exceptional opportunities for pharmacologic research. These cells provide an essentially unlimited supply of cell types that are difficult to obtain from patients, such as neurons or cardiomyocytes, or are difficult to maintain in primary cell culture. iPSC can be obtained from patients afflicted with a particular disease, but in combination with recently developed gene editing techniques, can also be modified to generate disease models. Moreover, the new techniques of 3D printing and materials science facilitate the generation of organoids that can mirror organs under disease conditions. These properties make iPSC powerful tools to study how diseases develop and how they may be treated. In addition, iPSC can also be used to treat conditions in which the target cell population has been lost, and such regenerative approaches hold great promise for currently untreatable diseases, including cardiac failure or photoreceptor degenerations.

The HLA Complex in Biology and Medicine Narinder K. Mehra, 2010-11-26. A comprehensive guide to the HLA (Human Leukocyte Antigen) system for immunologists and clinicians, this book contains up-to-date information on the MHC (Major Histocompatibility Complex) and its role in the immune response and in various diseases. The book explores the biological significance and role of the HLA system in organ and haematopoietic stem cell transplantation management. This volume is an invaluable guide to the full spectrum of HLA-related science while also serving as a conceptual and technical resource for those involved in HLA-related research and in clinical or surgical practice. In addition, it will be a primary point of contact for individuals working in other areas who suddenly find that their research is drawing them into the complexities of HLA genetics.
