and 1940s Darwin's concept of evolutionary adaptation through natural selection became central to modern evolutionary theory and it has now become the unifying concept of the life sciences

Summary of Darwin's theory

Darwin's theory of evolution is based on key facts and the inferences drawn from them which biologist Ernst Mayr summarised as follows

- Every species is fertile enough that if all offspring survived to reproduce the population would grow
- fact Despite periodic fluctuations populations remain roughly the same size
- fact Resources such as food are limited and are relatively stable over time
- fact A struggle for survival ensues
- inference Individuals in a population vary significantly from one another
- fact Much of this variation is inheritable
- fact Individuals less suited to the environment are less likely to survive and less likely to reproduce
- individuals more suited to the environment are more likely to survive and more likely to reproduce and leave their inheritable traits to future generations which produces the process of natural selection
- inference This slowly effected process results in populations changing to adapt to their environments and ultimately these variations accumulate over time to form new species
- inference

The Origin of Species Charles Darwin, 1975 With an Introduction by Jeff Wallace A grain in the balance will determine which individual shall live and which shall die Darwin's theory of natural selection issued a profound challenge to orthodox thought and belief no being or species has been specifically created all are locked into a pitiless struggle for existence with extinction looming for those not fitted for the task Yet The Origin of Species 1859 is also a humane and inspirational vision of ecological interrelatedness revealing the complex mutual interdependencies between animal and plant life climate and physical environment and by implication within the human world Written for the general reader in a style which combines the rigour of science with the subtlety of literature The Origin of Species remains one of the founding documents of the modern age

Evolution Edward J. Larson, 2006-08-08 I often said before starting that I had no doubt I should frequently repent of the whole undertaking So wrote Charles Darwin aboard The Beagle bound for the Galapagos Islands and what would arguably become the greatest and most controversial discovery in scientific history But the theory of evolution did not spring full blown from the head of Darwin Since the dawn of humanity priests philosophers and scientists have debated the origin and development of life on earth and with modern science that debate shifted into high gear In this lively deeply erudite work Pulitzer Prize winning science historian Edward J Larson takes us on a guided tour of Darwin s dangerous idea from its theoretical antecedents in the early nineteenth century to the brilliant breakthroughs of Darwin and Wallace to Watson and Crick s stunning discovery of the DNA double helix and to the triumphant neo Darwinian synthesis and rising sociobiology today Along the way Larson expertly places the scientific upheaval of evolution in cultural perspective the social and philosophical earthquake that was the French Revolution the development in England of a laissez faire capitalism in tune with a Darwinian ethos of survival of the fittest the emergence of Social Darwinism and the dark science of eugenics against a backdrop of industrial revolution the American Christian backlash against evolutionism that culminated in the famous Scopes trial and on to today s world where religious fundamentalists litigate for the right to teach creation science alongside evolution in U S public schools even as the theory itself continues to evolve in new and surprising directions Throughout Larson trains his spotlight on the lives and careers of the scientists explorers and eccentrics whose collaborations and competitions have driven the theory of evolution forward Here are portraits of Cuvier Lamarck Darwin Wallace Haeckel Galton Huxley Mendel Morgan Fisher Dobzhansky Watson and Crick W D Hamilton E O Wilson and many others Celebrated as one of mankind s crowning scientific achievements and reviled as a threat to our deepest values the theory of evolution has utterly transformed our view of life religion origins and the theory itself and remains controversial especially in the United States where 90% of adults do not subscribe to the full Darwinian vision Replete with fresh material and new insights Evolution will educate and inform while taking readers on a fascinating journey of discovery
