Jusczyk, 2000 The Discovery of Spoken Language marks one of the first efforts to integrate the field of infant speech perception research into the general study of language acquisition It fills in a key part of the acquisition story by providing an extensive review of research on the acquisition of language during the first year of life focusing primarily on how normally developing infants learn the organization of native language sound patterns Peter Jusczyk examines the initial capacities that infants possess for discriminating and categorizing speech sounds and how these capacities evolve as infants gain experience with native language input Jusczyk also looks at how infants growing knowledge of native language sound patterns may facilitate the acquisition of other aspects of language organization and discusses the relationship between the learner's developing capacities for perceiving and producing speech **Spoken Language**

**Computational Approaches to Language Acquisition** Michael R. Brent, 1997 The past fifteen years have seen great changes in the field of language acquisition New experimental methods have yielded insights into the linguistic knowledge of ever younger children and interest has grown in the phonological syntactic and semantic aspects of the lexicon Computational investigations of language acquisition have also changed reflecting among other things the profound shift in the field of natural language processing from hand crafted grammars to grammars that are learned automatically from samples of naturally occurring language Each of the four research papers in this book takes a novel formal approach to a particular problem in language acquisition In the first paper J M Siskind looks at developmentally inspired models of word learning In the second M R Brent and T A Cartwright look at how children could discover the sounds of words given that word boundaries are not marked by any acoustic analog of the spaces between written words In the third P Resnik measures

the association between verbs and the semantic categories of their arguments that children likely use as clues to verb meanings Finally P Niyogi and R C Berwick address the setting of syntactic parameters such as headedness for example whether the direct object comes before or after the verb     **A Plea for Spoken Language** James Edward Murdoch,1883
