Discrete-Event Control of Stochastic Networks: Multimodularity and Regularity Eitan Altman,2003 *Discrete-Event Control of Stochastic Networks* Eitan Altman,Bruno Gaujal,Arie Hordijk,2014-01-15 **Discrete-Event Control of Stochastic Networks: Multimodularity and Regularity** Eitan Altman,Bruno Gaujal,Arie Hordijk,2003-12-09 Opening new directions in research in both discrete event dynamic systems as well as in stochastic control this volume focuses on a wide class of control and of optimization problems over sequences of integer numbers This is a counterpart of convex optimization in the setting of discrete optimization The theory developed is applied to the control of stochastic discrete event dynamic systems Some applications are admission routing service allocation and vacation control in queuing networks Pure and applied mathematicians will enjoy reading the book since it brings together many disciplines in mathematics combinatorics stochastic processes stochastic control and optimization discrete event dynamic systems algebra *Discrete-Event Control of Stochastic Networks: Multimodularity and Regularity* Eitan Altman,Bruno Gaujal,Arie Hordijk,2003-11-17 Opening new directions in research in both discrete event dynamic systems as well as in stochastic control this volume focuses on a wide class of control and of optimization problems over sequences of integer numbers This is a counterpart of convex optimization in the setting of discrete optimization The theory developed is applied to the control of stochastic discrete event dynamic systems Some applications are admission routing service allocation and vacation control in queuing networks Pure and applied mathematicians will enjoy reading the book since it brings together many disciplines in mathematics combinatorics stochastic processes stochastic control and optimization discrete event dynamic systems algebra *Partially Observed Markov Decision Processes* Vikram Krishnamurthy,2016-03-21 Covering formulation algorithms and structural results and linking theory to real world applications in controlled sensing including social learning adaptive radars and sequential detection this book focuses on the conceptual foundations of partially observed Markov decision processes POMDPs It emphasizes structural results in stochastic dynamic programming enabling graduate students and researchers in engineering operations research and economics to understand the underlying unifying themes without getting weighed down by mathematical technicalities Bringing together research from across the literature the book provides an introduction to nonlinear filtering followed by a systematic development of stochastic dynamic programming lattice programming and reinforcement learning for POMDPs Questions addressed in the book include when does a POMDP have a threshold optimal policy When are myopic policies optimal How do local and global decision makers interact in adaptive decision making in multi agent social learning where there is herding and data incest And how can sophisticated radars and sensors adapt their sensing in real time **Paris-Princeton Lectures on Mathematical Finance ...** ,2004 **Mathematical Reviews** ,2004 Efficient simulation algorithms for optimization of discrete event systems based on measure-valued differentiation Taoying Farenhorst-Yuan,2010 **LNM** ,2008 Contents of 1 14 1966 67 1978 79 in v 15 1979 80 *Tutorials in*

Mathematical Biosciences, 2005 Fluctuation Theory for Lévy Processes Ronald A. Doney, 2007-04-19 Lévy processes i.e. processes in continuous time with stationary and independent increments are named after Paul Lévy who made the connection with infinitely divisible distributions and described their structure. They form a flexible class of models which have been applied to the study of storage processes, insurance risk, queues, turbulence, laser cooling, and of course finance, where the feature that they include examples having heavy tails is particularly important. Their sample path behaviour poses a variety of difficult and fascinating problems. Such problems and also some related distributional problems are addressed in detail in these notes that reflect the content of the course given by R. Doney in St Flour in 2005 **Construction of Global Lyapunov Functions Using Radial Basis Functions** Peter Giesl, 2007-04-04 The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function. A new method to construct such a Lyapunov function using radial basis functions is presented in this volume intended for researchers and advanced students from both dynamical systems and radial basis functions. Besides an introduction to both areas and a detailed description of the method it contains error estimates and many examples *Beyond Partial Differential Equations* Horst Reinhard Beyer, 2007-04-04 The present volume is self-contained and introduces to the treatment of linear and nonlinear quasi-linear abstract evolution equations by methods from the theory of strongly continuous semigroups. The theoretical part is accessible to graduate students with basic knowledge in functional analysis. Only some examples require more specialized knowledge from the spectral theory of linear self-adjoint operators in Hilbert spaces. Particular stress is on equations of the hyperbolic type since considerably less often treated in the literature. Also evolution equations from fundamental physics need to be compatible with the theory of special relativity and therefore are of hyperbolic type. Throughout detailed applications are given to hyperbolic partial differential equations occurring in problems of current theoretical physics in particular to Hermitian hyperbolic systems. This volume is thus also of interest to readers from theoretical physics Local and Semi-Local Bifurcations in Hamiltonian Dynamical Systems Heinz Hanßmann, 2007 Once again KAM theory is committed in the context of nearly integrable Hamiltonian systems. While elliptic and hyperbolic tori determine the distribution of maximal invariant tori, they themselves form n parameter families. Hence without the need for untypical conditions or external parameters, torus bifurcations of high co-dimension may be found in a single given Hamiltonian system. The text moves gradually from the integrable case in which symmetries allow for reduction to bifurcating equilibria to non-integrability where smooth parametrisations have to be replaced by Cantor sets. Planar singularities and their versal unfoldings are an important ingredient that helps to explain the underlying dynamics in a transparent way **Punctured Torus Groups and 2-bridge Knot Groups**, 2007 **The British National Bibliography** Arthur James Wells, 2004 *Singular Coverings of Toposes* Marta Bunge, Jonathon Funk, 2006-08-21 This volume presents a self-contained theory of certain singular coverings of toposes including branched coverings. This book is distinguished from classical treatments of the subject by its unexpected

connection with a topic from functional analysis namely distributions Although primarily aimed at topos theorists this book may also be used as a textbook for advanced graduate courses introducing topos theory with an emphasis on geometric applications American Book Publishing Record ,2004 *Intersections de deux quadriques et pinceaux de courbes de genre 1* Olivier Wittenberg,2007-02-09 Cet ouvrage est consacré à l'arithmétique des surfaces fibrées en courbes de genre 1 au-dessus de la droite projective et à l'arithmétique des intersections de deux quadriques dans l'espace projectif Swinnerton Dyer introduisit en 1993 une technique permettant d'étudier les points rationnels des pinceaux de courbes de genre 1 La première moitié de l'ouvrage reprend et développe cette technique ainsi que ses généralisations ultérieures La seconde moitié qui repose sur la première porte sur les surfaces de del Pezzo de degré 4 et sur les intersections de deux quadriques de dimension supérieure les résultats annoncés dans C R Math Acad Sci Paris 342 2006 no 4 223-227 y sont démontrés This research monograph focuses on the arithmetic over number fields of surfaces fibred into curves of genus 1 over the projective line and of intersections of two quadrics in projective space The first half contains a complete account of the technique initiated by Swinnerton Dyer in 1993 for studying rational points on pencils of curves of genus 1 while incorporating and generalising most of its subsequent refinements The second half which builds upon the first is devoted to quartic del Pezzo surfaces and higher dimensional intersections of two quadrics It culminates in the proof of the results announced in C R Math Acad Sci Paris 342 2006 no 4 223-227 *Stochastic Discrete Event Systems* Armin Zimmermann,2010-10-19 Stochastic discrete event systems SDES capture the randomness in choices due to activity delays and the probabilities of decisions This book delivers a comprehensive overview on modeling with a quantitative evaluation of SDES It presents an abstract model class for SDES as a pivotal unifying result and details important model classes The book also includes nontrivial examples to explain real world applications of SDES
