Coronary Artery Spasm:

Coronary Artery Spasm Robert A. Chahine, 1983 *Coronary Artery Spasm* Charles Richard Conti, 1986 Coronary Vasomotion Abnormalities Hiroaki Shimokawa, 2020-12-08 This book reviews the latest findings on epicardial coronary spasm and coronary microvascular dysfunction CMD important diseases for understanding coronary artery vasomotion abnormalities The book chiefly consists of two major parts each of which explores the epidemiology pathophysiology diagnosis and treatment of the diseases The chapters present a range of experimental and clinical studies including the editor's life's work on coronary spasm how Rho kinase activation plays an important role in connection with the disease how chronic adventitial inflammation is a central pathophysiology of the spasm the importance of Rho kinase activation in the pathogenesis of CMD how epicardial spasm and CMD frequently co-exist and much more *Coronary Vasomotion Abnormalities* will help practicing cardiologists cardiac surgeons vascular biologists and radiologists understand the latest issues concerning the clinical interventional and surgical management of these conditions and offer these readers valuable insights into the effective treatment of microvascular angina *A Comprehensive Guide to Understanding and Managing Coronary Artery Spasm* Dr. Spineanu Eugenia, 2025-03-12 Dive into Calm the Constrictions an extensive guide shedding light on Coronary Artery Spasm CAS This treatise offers an in-depth exploration of CAS covering its definition epidemiology pathophysiology risk factors clinical presentation and more With detailed insights into the structure and function of coronary arteries as well as the role of nitric oxide calcium ion channels and inflammatory pathways readers gain a comprehensive understanding of CAS mechanisms From diagnostic techniques like ECG and coronary angiography to stress management techniques and integrative medicine approaches this guide equips readers with practical strategies for effective CAS management Whether you're a healthcare professional or someone affected by CAS Calm the Constrictions provides invaluable knowledge and insights to navigate this challenging cardiovascular condition Coronary Artery Spasm John D. Rutherford, National Heart Foundation of New Zealand, 1984 **Coronary Tone in Ischemic Heart Disease** W. Kupper, W. Bleifeld, R.N. MacAlpin, 2012-12-06 W KUPPER Coronary artery vasoconstriction is not only the mechanism responsible for Prinzmetal's variant angina but may also be involved in stable angina pectoris and myocardial infarction However the underlying pathophysiological mechanisms and the importance of coronary vasoconstriction in these syndromes is still largely unknown Several hypotheses have been proposed Sympathetic nervous activity plays a key role in the regulation of coronary blood flow but mechanical or humoral constrictive factors may be active as well as adrenergic tone Adrenergic nerve fibers accompany coronary vessels of any size The stimulation of cardiac sympathetic nerves causes an increase in coronary blood flow If however chronotropic and inotropic effects of adrenergic stimulation are suppressed pharmacologically by beta-adrenoceptor blockade a reduction in flow is observed Thus the primary effect of sympathetic stimulation on the coronary arteries is the alpha-adrenergic mediated vasoconstriction Functionally innervated alpha-adrenoceptors have been

documented both in large coronary conductance arteries and in the small resistance vessels Animal studies and a human study have documented that a permanent constrictor tone is present on the coronary circulation both at rest and during exercise this condition could be prevented with alpha adrenoceptor blockade or was absent after heart transplantation Therefore alpha adrenoceptor mediated coronary constriction is an attractive hypothesis as a possible pathophysiological mechanism of inappropriate coronary vasoconstriction and coronary vasospasm

Vanhoutte, 2012-12-06 MOTOOMI NAKAMURA As we approach the 21st century ischemic heart disease is the major cause of death in most of the developed nations of the world Since the 1970s much effort and expense have led to designs of coronary thrombolytic therapy percutaneous coronary angioplasty PTCA coronary artery bypass grafting heart transplantation automatic defibrillators as well as to the formation of beta blockers and compounds which block the calcium channel Socio educational programs directed at exercise diet instruction in the risk factors of smoking hyperlipidemia and hypertension have contributed to the decrease in the rate of morbidity and mortality of patients with ischemic heart disease However the first clinical event of ischemic heart disease the so called heart attack and sudden cardiac death continues to present problems as the mechanisms involved in these events are poorly understood It has long been thought that ischemic heart disease is the sequence of an organic fixed atherosclerotic obstruction of the epicardial coronary arteries and the role of coronary vasomotion has been given much less attention Recent clinical and laboratory animal studies revealed that increased tone and spasm of the large epicardial coronary arteries are the cause of various stages of ischemic heart disease The role of coronary vasospasm in the development of unstable angina sudden cardiac death and acute myocardial infarction remains open to debate Pharmacophysiological studies showed that the epicardial large coronary artery contributes only 5% to regulation of normal coronary flow
