Correspondence Of Charles Darwin 1856 1857:

The Correspondence of Charles Darwin: Volume 6, 1856-1857 Charles Darwin, Frederick Burkhardt, 1985 For the first time full authoritative texts of Darwin's are made available edited according to modern textual editorial principles and practice Letter writing was of crucial importance to Darwin's work not only because his poor health isolated him from direct personal communication with his scientific colleagues but also because the nature of his investigations required communication with naturalists in many fields and in all quarters of the globe Thus the letters are a mine of information about the work in progress of a creative genius who produced an intellectual revolution

[The Correspondence of Charles Darwin](#): Charles Darwin, 1985-03-07 This volume inaugurates a complete edition of *The Correspondence of Charles Darwin* For the first time full authoritative texts of Darwin's letters are available edited according to modern textual editorial principles and practice The first volume of the edition contains the letters of the years 1821-1836 They begin with one written to Darwin at the age of twelve and continue through his school days at Shrewsbury his two years as a medical student at Edinburgh the undergraduate years at Cambridge and his five years of exploration and learning during the voyage of the *Beagle* These were Darwin's years of initiation and preparation for a life of science In the earliest letters Darwin appears already keenly interested in natural history and an avid collector of minerals plants marine invertebrates and insects especially beetles The letters of the succeeding years tell the story of the young Darwin's development up to his return to England when at the age of twenty seven he was received as a colleague by Charles Lyell Adam Sedgwick and other leading scientists who had already heard of his discoveries and observations during the *Beagle* voyage

[Origins of Darwin's Evolution](#) J. David Archibald, 2017-10-10 Historical biogeography the study of the history of species through both time and place first convinced Charles Darwin of evolution This field was so important to Darwin's initial theories and line of thinking that he said as much in the very first paragraph of *On the Origin of Species* 1859 and later in his autobiography His methods included collecting mammalian fossils in South America clearly related to living forms tracing the geographical distributions of living species across South America and sampling peculiar fauna of the geologically young Galapagos Archipelago that showed evident affinities to South American forms Over the years Darwin collected other evidence in support of evolution but his historical biogeographical arguments remained paramount so much so that he devotes three full chapters to this topic in *On the Origin of Species* Discussions of Darwin's landmark book too often give scant attention to this wealth of evidence and we still do not fully appreciate its significance in Darwin's thinking In *Origins of Darwin's Evolution* J David Archibald explores this lapse showing how Darwin first came to the conclusion that instead of various centers of creation species had evolved in different regions throughout the world He also shows that Darwin's other early passion geology proved a more elusive corroboration of evolution *On the Origin of Species* has only one chapter dedicated to the rock and fossil record as it then appeared too incomplete for Darwin's evidentiary standards Carefully retracing Darwin's gathering of evidence and the

evolution of his thinking *Origins of Darwin's Evolution* achieves a new understanding of how Darwin crafted his transformative theory *Darwin's Fishes* Daniel Pauly,2007-08-27 In *Darwin's Fishes* Daniel Pauly presents an encyclopaedia of ichthyology ecology and evolution based upon everything that Charles Darwin ever wrote about fish Entries are arranged alphabetically and can be about for example a particular fish taxon an anatomical part a chemical substance a scientist a place or an evolutionary or ecological concept The reader can start wherever they like and are then led by a series of cross references on a fascinating voyage of interconnected entries each indirectly or directly connected with original writings from Darwin himself Along the way the reader is offered interpretation of the historical material put in the context of both Darwin's time and that of contemporary biology and ecology This book is intended for anyone interested in fishes the work of Charles Darwin evolutionary biology and ecology and natural history in general *Biotic Evolution and Environmental Change in Southeast Asia* David J. Gower,2012-07-19 Authoritative reviews and focused case studies on the history and future of the fauna and flora of Southeast Asia *Darwin's Apprentice* Janet Owen,2013-03-27 The fascinating story of Charles Darwin's friend fellow scientist and champion Sir John Lubbock was an important Darwinist witness to an extraordinary moment in the history of science and archaeology the emotive scientific religious and philosophical debate which was triggered by the publication of Darwin's *On the Origin of Species* in 1859 *Darwin's Apprentice* looks at Lubbock's critical yet often overlooked role in the Darwinian campaign including the ways in which Lubbock's archaeological and ethnographic collections shaped both his work and personal life It offers an enlightening view not only of the beginnings of Darwinism but of the scientific world of late nineteenth century Britain ***Imperial Nature*** Jim Endersby,2020-05-21 Joseph Dalton Hooker 1817-1911 was an internationally renowned botanist a close friend and early supporter of Charles Darwin and one of the first and most successful British men of science to become a full time professional He was also Jim Endersby argues the perfect embodiment of Victorian science A vivid picture of the complex interrelationships of scientific work and scientific ideas *Imperial Nature* gracefully uses one individual's career to illustrate the changing world of science in the Victorian era By analyzing Hooker's career Endersby offers vivid insights into the everyday activities of nineteenth century naturalists considering matters as diverse as botanical illustration and microscopy classification and specimen transportation and storage to reveal what they actually did how they earned a living and what drove their scientific theories What emerges is a rare glimpse of Victorian scientific practices in action By focusing on science's material practices and one of its foremost practitioners Endersby ably links concerns about empire professionalism and philosophical practices to the forging of a nineteenth century scientific identity *Darwin in Galápagos* K. Thalia Grant,Gregory B. Estes,2009-11-22 Recreates the scientist's historic visit to the Galapagos Islands using his original notebooks and logs the latest findings by scholars and researchers and the author's first hand knowledge of the archipelago *Of Apes and Ancestors* Ian Hesketh,2009-01-01 By reconstructing the Oxford debate of 1860 on the merits of Charles Darwin's *Origin of Species* and

carefully considering the individual perspectives of the main participants Ian Hesketh argues that personal jealousies and professional agendas played a formative role in shaping the response to Darwin's hypothesis Occasional Papers of the California Academy of Sciences California Academy of Sciences,2009 The Scientific Savant in Nineteenth Century Australia ,1997 Isis Cumulative Bibliography 1986-1995 John Neu,1997 **Facets of Faith and Science: Interpreting God's action in the world** Jitse M. van der Meer,1996 History and Philosophy of the Life Sciences ,1990 **Natural History Book Reviews** ,1988 Journal of Conchology ,2003 **Victorian Periodicals Newsletter** ,1992 William Dwight Whitney and the Science of Language Stephen George Alter,1993 **The British National Bibliography** Arthur James Wells,1992 **Book Review Digest** ,1992
