Coping With Children's Temperament A Guide For Professionals:

Coping With Children's Temperament William B. Carey, Sean McDevitt, 1995-08-25 Why does one child and not another in a normal family develop a behavior problem? If a child is sensitive and likely to complain, how does that affect the quality and quantity of the medical care provided? What happens to the neurologically intact child who has trouble paying attention in school? Children's temperaments make a substantial contribution to their environments and their interactions with them. Certain of these largely inborn behavioral style differences, which are not abnormal in themselves, may lead to clinical problems by predisposing children to abrasive incompatible relationships with caregivers. In this book, William B. Carey and Sean C. McDevitt present a clear, concise summary of the recent clinical research on temperament in particular from the last ten years, coupled with practical suggestions on how to use this information in a variety of clinical and educational settings. These management strategies were assembled from their own extensive clinical experience and that of others. They take the professional psychologist, physician, nurse, teacher, day care worker, and social worker through all the stages of a child's life to show how the effects of temperament play out in infancy, the preschool years, middle childhood, and adolescence. Richly illustrated with detailed case examples, this outstanding book brings theory and practice to life and shows how all who work with children can improve their care by understanding these important differences. **The Oxford**

Handbook of Infant, Toddler, and Preschool Mental Health Assessment Rebecca DelCarmen-Wiggins, Alice S. Carter, 2019-12-02 This fully updated new edition of *The Oxford Handbook of Infant, Toddler, and Preschool Mental Health Assessment* remains the leading reference for those seeking to understand and assess mental health in infants and young children. Detailing the latest empirical research on measures and methods of infant and young child assessment and providing clinically applicable information for practitioners, this handbook takes a closer look at current developmentally based conceptualizations of mental health function and dysfunction in infants and young children, as well as current and new diagnostic criteria in specific disorders such as sensory modulation dysfunction, autism spectrum disorders, affective disorders, and post-traumatic stress disorder. Presented in four sections, chapters correspond to four broad themes: contextual factors in early assessment; temperament and regulation in assessment of young children; early problems and disorders; and translation and varied applied settings for assessment. Each chapter presents state-of-the-science information on valid developmentally based clinical assessment and makes recommendations based on developmental theory, empirical findings, and clinical experience. Chapters have been added to this second edition covering family assessment, early care and educational environments, new approaches for distinguishing temperament from psychopathology, assessing language and implementing second stage screening and referral. The volume recognizes and highlights the important role of developmental, social, and cultural contexts in approaching the challenge of assessing early problems and disorders. This new updated volume will be an ideal resource for teachers, researchers, and a wide variety of clinicians and trainees, including child psychologists.
