Correspondence, Invariance and Heuristics S. French, H. Kamminga, 2013-03-09 This volume is presented in honour of Heinz Post who founded a distinctive and distinguished school of philosophy of science at Chelsea College University of London The Chelsea tradition in philosophy of science takes the content of science seriously as exemplified by the papers presented here The unifying theme of this work is that of Correspondence Invariance and Heuristics after the title of a classic and seminal paper by Heinz Post published in 1971 which is reproduced in this volume with the kind permission of the editors and publishers of Studies in History and Philosophy of Science Described by Paul Feyerabend in *Against Method* as brilliant and a partial antidote against the view which I try to defend 1975 p 61 fn 17 this paper peppered with illustrative examples from the history of science brings to the fore some of Heinz Post's central concerns the heuristic criteria used by scientists in constructing their theories the intertheoretic relationships which these criteria reflect and in particular the nature of the correspondence that holds between a theory and its predecessors and its successors The appearance of this volume more than twenty years later is an indication of the fruitfulness of Post's contribution philosophers of science continue to explore the issues raised in his 1971 paper

Rethinking Scientific Change and Theory Comparison: Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29 L NA SOLER This volume is a collection of essays devoted to the analysis of scientific change and stability It represents the most recent thinking on the topic of incommensurability and scientific theory change It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other And it discusses some central epistemological consequences regarding the nature of scientific progress rationality and realism With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'évaluation comparative des théories scientifiques stabilité ruptures incommensurabilité* organized by Léna Soler and Paul Hoyningen-Huene at the University of Nancy France in June 2004 Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science historians of science and scientists who come from different traditions and endorse opposing commitments I hope that this is evident in the book too and that it will constitute one of its attractions
