The rights and wrongs of zebrafish: Behavioral phenotyping of zebrafish Allan V. Kalueff,2017-02-06 Animal models and tests have become increasingly important for biomedical research enabling a better understanding of pathogenic pathways involved in various human disorders Over the last decades zebrafish *Danio rerio* have become a very popular model organism in biomedical research Recently this fish has entered the waters of neuroscience and biological psychiatry quickly becoming an indispensable model species in this field With a high genetic homology to humans 75% based on coding regions it is not surprising that humans and fish are very similar physiologically and behaviorally Therefore it should not come as a surprise that zebrafish can be an excellent model of human neuropsychiatric disorders While some classical psychiatrists may not too easily be persuaded by this generalization the current book *The rights and wrongs of zebrafish principles of behavioral phenotyping and CNS disease modeling* explains in a domain by domain manner how exactly zebrafish models can be used to target a wide range of human
