Darwin Wars Scientific Battle For The Soul Of Man:

The Darwin Wars Andrew Brown, 2002 A witty insightful examination of today's rival Darwinian theories the shocking feuds between the different camps and what it all means for our understanding of evolution and human nature *The Darwin Wars* is an entertaining account of today's competing neo Darwinist theories including the influential selfish gene theory and the misunderstandings and even deep hatreds they provoke For the first time an impartial observer explains and evaluates the ideas that have transformed the field of biology and shows the profound impact they have had on our beliefs and our culture

The Darwin Wars Andrew Brown, 1999 This is an account of neo Darwinist theories including the influential Selfish Gene theory and the misunderstandings they provoke Divided between Dawkinsians and Gouldians these theories are explained and evaluated showing the profound impact they have had on beliefs and culture

Darwin's Armada: Four Voyages and the Battle for the Theory of Evolution Iain McCalman, 2010-11-15 Sparkling an extraordinary true adventure story complete with trials tribulations and moments of exultation Kirkus Reviews starred review Award winning cultural historian Iain McCalman tells the stories of Charles Darwin and his staunchest supporters Joseph Hooker Thomas Huxley and Alfred Wallace Beginning with the somber morning of April 26 1882 the day of Darwin's funeral Darwin's Armada steps back and recounts the lives and scientific discoveries of each of these explorers who campaigned passionately in the war of ideas over evolution and advanced the scope of Darwin's work

Species of Origins Karl Giberson, Donald A. Yerxa, 2002 In *Species of Origins* Karl W. Giberson and Donald A. Yerxa examine America's controversial conversation about creation and evolution While noting that part of the discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic science and traditional Judeo-Christian religions Visit our website for sample chapters

The Darwin Wars Andrew Brown, 2000 THE DARWIN WARS is an entertaining explanatory account of the evolution of today's neo Darwinist theories including the influential Selfish Gene theory and the misunderstandings and even deep hatreds they provoke The two scientific camps are currently divided between Dawkinsians on the one hand who may not agree with Richard Dawkins about very much but are convinced Stephen Jay Gould is dangerously wrong and the Gouldians on the other hand who take the opposite view The two sides agree that Darwinian evolution explains the appearance and complexity of living beings They disagree about almost everything else Their vitriolic attacks might seem like academic storms in a teacup but in fact they are disputing our very nature and place in the world For the first time an impartial observer explains and evaluates the ideas that have transformed biology since the 1960s their importance and the criticisms that have been made of them Above all THE DARWIN WARS shows the profound impact these theories have had on our beliefs and our culture

Criticizing Science Myrna Perez, 2024-12-17 This work is an examination of the criticisms of science from both left and right wing political movements through the lens of the scientist Stephen Jay Gould [Suitable](#)

Heresies Graham Rabey, 2009 The theory suggests that there is a structural similarity between certain basic brain forms and certain basic mind forms and that the former provide a credible explanation for the latter It does not suggest that the causative link has been proved thereby What is claimed is that in the jungle of brain mind research where fundamental physical evidence for speculation is often in short supply the theory provides a scientifically and philosophically arguable clearing and thus a hypothesis worthy of investigation by anyone interested in the mysteries of human thought One implication of the theory amounts to a central heresy namely that on the accumulating evidence our traditional and much cherished one truth thinking conventions will need to be replaced by two truth thinking conventions Another implication of the theory is that it now seems entirely possible that the emergence and nature of philosophy itself have been crucially dependent on our long human struggle to extract single responses from thinking equipment that appears necessarily to be anatomically double and circular the double cycles being mutually inverted *Stephen Jay Gould and the Politics of Evolution* David Forrest Prindle, 2009 While many people have written about Gould's science and a few have written about his politics this is the first book to explore his science and politics as a consistent whole Political scientist Prindle argues that Gould's concepts and arguments were bona fide contributions to science but all of them also contained specifically political implications

International Who's Who of Authors and Writers 2008 Europa Publications, 2007-08-23 An invaluable source of information on the personalities and organizations of the literary world

Understanding Popular Science Peter Broks, 2006-06 Science is a defining feature of the modern world and popular science is where most of us make sense of that fact Understanding Popular Science provides a framework to help understand the development of popular science and current debates about it In a lively and accessible style Peter Broks shows how popular science has been invented redefined and fought over From early nineteenth century radical science to twenty first century government initiatives he examines popular science as an arena where the authority of science and the authority of the state are legitimized and challenged The book includes clear accounts of the public perception of scientists visions of the future fears of an anti science movement and concerns about scientific literacy The final chapter proposes a new model for understanding the interaction between lay and expert knowledge This book is essential reading in cultural studies science studies history of science and science communication

Shakespeare and the Nature of Love Marcus Nordlund, 2007 The best conception of love Marcus Nordlund contends and hence the best framework for its literary analysis must be a fusion of evolutionary cultural and historical explanation It is within just such a bio cultural nexus that Nordlund explores Shakespeare's treatment of different forms of love His approach leads to a valuable new perspective on Shakespearean love and more broadly on the interaction between our common humanity and our historical contingency as they are reflected recast transformed or even suppressed in literary works After addressing critical issues about love biology and culture raised by his method Nordlund considers four specific forms of love in seven of Shakespeare's plays Examining the vicissitudes of parental love in *Titus Andronicus* and

Coriolanus he argues that Shakespeare makes a sustained inquiry into the impact of culture and society upon the natural human affections King Lear offers insight into the conflicted relationship between love and duty In two problem plays about romantic love Troilus and Cressida and All s Well that Ends Well the tension between individual idiosyncrasies and social consensus becomes especially salient And finally in Othello and The Winter s Tale Nordlund asks what Shakespeare can tell us about the dark avatar of jealousy

Science and the Power of TV Jaap Willems,Winfried Göpfert,2006 Has the advent of internet diminished the role television plays in science communication Some might think so but we don t We are convinced that television still plays an important role in keeping the general public informed of developments from the world of science and technology and its influences on society Television might still even be the most important channel given that in Europe and the US almost everybody watches it much more so than surfing the internet regularly or reading newspapers and magazines Still television programmes on science are hard to find It is a fact that academics and public affairs officers do not always appreciate the power of this medium By showing the possibilities television has to offer this book intends to change this attitude Besides documentaries other formats are equally suited to help popularise science and technology related subjects news items soaps docudrama s talk shows and quizzes
