Darwinian Evolution:

The Eclipse of Darwinism Peter J. Bowler, 1983 In this pioneering study of the first major challenges to Darwinism Peter J Bowler examines the competing theories of evolution identifies their intellectual origins and describes the process by which the modern concept of evolution emerged Describing the variety of influences that drove scientists to challenge Darwin's conclusions Bowler reevaluates the influence of social forces on the scientific community and explores the broad philosophical ideological and social implications of scientific theories *The Reception of Darwinian Evolution in Britain, 1859-1909* Martin Hewitt, 2024-10-20 The Reception of Darwinian Evolution in Britain 1859 1909 Darwinism's Generations uses the impact of Charles Darwin's *On the Origin of Species* 1859 in the 50 years after its publication to demonstrate the effectiveness of a generational framework for understanding the cultural and intellectual history of Britain in the nineteenth century It challenges conventional notions of the Darwinian Revolution by examining how people from across all sections of society actually responded to Darwin's writings Drawing on the opinions and interventions of over 2 000 Victorians drawn from an exceptionally wide range of archival and printed sources it argues that the spread of Darwinian belief was slower more complicated more stratified by age and ultimately shaped far more powerfully by divergent generational responses than has previously been recognised In doing so it makes a number of important contributions It offers by far the richest and most comprehensive account to date of how contemporaries came to terms with the intellectual and emotional shocks of evolutionary theory It makes a compelling case for taking proper account of age as a fundamental historical dynamic and for the powerful generational patternings of the effects that age produced It demonstrates the extent to which the most common sub periodisation of the Victorian period are best understood not merely as constituted by the exigencies of events but are also formed by the shifting balance generational influence Taken together these insights present a significant challenge to the ways historians currently approach the task of describing the nature and experience of historical change and have fundamental implications for our current conceptions of the shape and pace of historical time **Darwinian Evolution** Antony Flew, 2018-01-18 In little more than a hundred years the evolutionary theory of Charles Darwin has conquered the thinking world No other body of ideas has enjoyed such unrivaled success But precisely because of its scientific status Darwinism has sometimes been invoked to sustain other ideas and beliefs with a much less solid foundation Darwinian Evolution is a study of the historical background of Darwin's ideas of their logical structure and of their alleged and actual implications Flew explores the Scottish Enlightenment an important and often neglected aspect of Darwin's intellectual background He compares Darwin with such figures as Adam Smith Thomas Malthus and Karl Marx emphasizing not the similarities but the differences between the natural and social sciences Flew argues that social science must do what natural science does not take account of individual choice He examines the creationist controversy in Britain and the United States and discusses the possibility of a human sociobiology In his new introduction Flew updates his book by discussing relevant

works that have appeared since it was published thirteen years ago He discusses two different tendencies among both social scientists and those who develop or promote social policies according to various findings in the social sciences 1 to assume there is no such thing as human nature and 2 to take no account of the possibility that differences between sets of individuals may be genetically determined Flew maintains that both these tendencies violate Darwin's theory Darwinian Evolution is an intriguing study that should be read by sociologists biologists philosophers and all those interested in the impact of Darwin and his work

Darwinism and Evolutionary Economics John Laurent, John Nightingale, 2001-01-01 This outstanding collection of essays by leading scholars helps explain how evolutionary economics has come of age They show how evolutionary economics offers a progressive and diverse research agenda built on strong foundations These are essays of lasting value J Stanley Metcalfe University of Manchester UK Darwinism is fast becoming an orthodoxy of modern thought a framework within which a wide range of knowledge communities conduct their discourse Ever since its formation Darwinian theory has experienced a close though not always comfortable association with economics Evolutionary economists now appear to show little concern for the consistency of knowledge in their embrace of Darwinism Darwinism and Evolutionary Economics brings together contributions from eminent authors who building on Darwin's own insights and on developments in evolutionary theory offer challenging views on how economics can use evolutionary ideas effectively This collection of critical essays provides a thorough examination of the application of Darwinian theory to economic thought and will appeal to evolutionary economists and all those with an interest in Darwin innovation and evolutionary science

Darwin's Legacy: The Status of Evolutionary Archaeology in Argentina Marcelo Cardillo, Hernán Muscio, 2016-01-22 This book collects the contributions to the symposium The current state of evolutionary archeology in Argentina that was held in Buenos Aires for celebrating the 200th anniversary of Charles Darwin's birth and the 150th anniversary of the publication of On the Origin of Species

Darwin's Dangerous Idea Daniel C. Dennett, 1996-06-12 In a book that is both groundbreaking and accessible Daniel C Dennett whom Chet Raymo of The Boston Globe calls one of the most provocative thinkers on the planet focuses his unerringly logical mind on the theory of natural selection showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe Dennett vividly describes the theory itself and then extends Darwin's vision with impeccable arguments to their often surprising conclusions challenging the views of some of the most famous scientists of our day

Evolution and Transitions in Complexity Gerard A.J.M Jagers op Akkerhuis, 2016-10-18 This book discusses several recent theoretic advancements in interdisciplinary and transdisciplinary integration in the field of evolution While exploring novel views the text maintains a close link with one of the most broadly held views on evolution namely that of Darwinian evolution This work puts forth a new point of view which allows researchers to define in detail the concept of evolution To create this conceptual definition the text applies a stringent object based focus With this focus the editor has been able to develop an object based pattern of evolution at the smallest scale Subsequently this smallest scale pattern is

used as an innovative basis for generalizations These generalizations create links between biological Darwinism and generalized Darwinism The object based approach that was used to suggest innovations in the field of Darwinian evolution also allowed for contributions to other topics such as major evolutionary transitions theory the definition of life and the relationships between evolution self organization and thermodynamics Together the chapters of this book and the multidisciplinary reflections and comments of various specialists on these chapters offer an exciting palette of innovative ideas

Prebiotic Chemistry and Life's Origin Michele Fiore, 2022-06-29 How life originated from the inanimate mixture of organic and inorganic compounds on the primordial earth remains one of the great unknowns in science This origin of life or abiogenesis continues to be examined in the context of the conditions and materials required for natural life to have begun on Earth both theoretically and experimentally This book provides a broad but in depth analysis of the latest discoveries in prebiotic chemistry from the microscopic to the macroscopic scale utilising experimental insight to provide a bottom up approach to plausibly explaining how life arose With contributions from global leaders this book is an ideal reference for postgraduate students and a single source of comprehensive information on the latest technical and theoretical advancements for researchers in a variety of fields from astrochemistry and astrophysics to organic chemistry and evolution

From So Simple a Beginning Charles Darwin, 2010-08-31 Hailed as superior by Nature this landmark volume is available in a collectible boxed edition Never before have the four great works of Charles Darwin Voyage of the H M S Beagle 1845 The Origin of Species 1859 The Descent of Man 1871 and The Expression of Emotions in Man and Animals 1872 been collected under one cover Undertaking this challenging endeavor 123 years after Darwin's death two time Pulitzer Prize winner Edward O Wilson has written an introductory essay for the occasion while providing new insightful introductions to each of the four volumes and an afterword that examines the fate of evolutionary theory in an era of religious resistance In addition Wilson has crafted a creative new index to accompany these four texts which links the nineteenth century Darwinian evolutionary concepts to contemporary biological thought Beautifully slipcased and including restored versions of the original illustrations From So Simple a Beginning turns our attention to the astounding power of the natural creative process and the magnificence of its products

The Evolution, 1877 Darwin and International Relations: On the Evolutionary Origins of War and Ethnic Conflict Bradley A. Thayer, 2009

One Long Argument Ernst Mayr, 1991-09 The great evolutionist Mayr elucidates the subtleties of Darwin's thought and that of his contemporaries and intellectual heirs A R Wallace T H Huxley August Weismann Asa Gray Mayr has achieved a remarkable distillation of Darwin's scientific thought and his legacy to twentieth century biology

Darwin's God Cornelius G. Hunter, 2019-10-01 Cornelius Hunter brilliantly supports his thesis that Darwinism is a mixture of metaphysical dogma and biased scientific observation that at its core evolution is about God not science Phillip E Johnson author Darwin on Trial Biophysicist Cornelius Hunter argues perceptively that the main supporting pole of the Darwinian tent has always been a theological assertion God wouldn't have done it that

way Rather than demonstrating that evolution is capable of the wonders they attribute to it Darwinists rely on a man made version of God to argue that He never would have made life with the particular suite of features we observe In lucid and engaging prose Hunter shines a light on Darwinian theology making plain what is too often obscured by technical jargon Michael J Behe Lehigh University This wonderfully insightful book will prove pivotal in the current reassessment of Darwinian evolution Darwinists argue that evolution has to be true because no self respecting deity would have created life the way we find it Hunter unmasks this theological mode of argumentation and argues convincingly that it is not merely incidental but indeed essential to how Darwinists justify evolution William A Dembski Baylor University A fascinating study of a much overlooked aspect of the origins controversy Stephen C Meyer Whitworth College

The Darwinian Tradition in Context Richard G. Delisle, 2017-12-29 The main goal of this book is to put the Darwinian tradition in context by raising questions such as How should it be defined Did it interact with other research programs Were there any research programs that developed largely independently of the Darwinian tradition Accordingly the contributing authors explicitly explore the nature of the relationship between the Darwinian tradition and other research programs running in parallel In the wake of the Synthetic Theory of Evolution which was established throughout the 1930s 1940s and 1950s historians and philosophers of biology devoted considerable attention to the Darwinian tradition i e linking Charles Darwin to mid Twentieth Century developments in evolutionary biology Since then more recent developments in evolutionary biology have challenged in part or entirely the heritage of the Darwinian tradition Not surprisingly this has in turn been followed by a historiographical recalibration on the part of historians and philosophers regarding other research programs and traditions in evolutionary biology In order to acknowledge this shift the papers in this book have been arranged on the basis of two main threads Part I A perspective that views Darwinism as either being originally pluralistic or having acquired such a pluralistic nature through modifications and borrowings over time Part II A perspective blurring the boundaries between non Darwinian and Darwinian traditions either by contending that Darwinism itself was never quite as Darwinian as previously assumed or that non Darwinian traditions took on board various Darwinian components when not fertilizing Darwinism directly Between a Darwinism reaching out to other research programs and non Darwinian programs reaching out to Darwinism the least that can be said is that this interweaving of intellectual threads blurs the historiographical field This volume aims to open vital new avenues for approaching and reflecting on the development of evolutionary biology

Time Frames Niles Eldredge, 1986

Darwinian Populations and Natural Selection Peter Godfrey-Smith, 2009-03-26 In 1859 Darwin described a deceptively simple mechanism that he called natural selection a combination of variation inheritance and reproductive success He argued that this mechanism was the key to explaining the most puzzling features of the natural world The exact nature of the Darwinian process has been controversial ever since Draws on new developments in biology philosophy of science and other fields to give a new analysis and extension of Darwin s idea The central concept used is that

of a Darwinian population a collection of things with the capacity to undergo change by natural selection From this starting point new analyses of the role of genes in evolution the application of Darwinian ideas to cultural change and evolutionary transitions that produce complex organisms and societies are developed [America's Darwin](#) Tina Gianquitto, Lydia Fisher, 2014-06-26 While much has been written about the impact of Darwin's theories on U S culture and countless scholarly collections have been devoted to the science of evolution few have addressed the specific details of Darwin's theories as a cultural force affecting U S writers America's Darwin fills this gap and features a range of critical approaches that examine U S textual responses to Darwin's works The scholars in this collection represent a range of disciplines literature history of science women's studies geology biology entomology and anthropology All pay close attention to the specific forms that Darwinian evolution took in the United States engaging not only with Darwin's most famous works such as *On the Origin of Species* but also with less familiar works such as *The Expression of the Emotions in Man and Animals* Each contributor considers distinctive social cultural and intellectual conditions that affected the reception and dissemination of evolutionary thought from before the publication of *On the Origin of Species* to the early years of the twenty first century These essays engage with the specific details and language of a wide selection of Darwin's texts treating his writings as primary sources essential to comprehending the impact of Darwinian language on American writers and thinkers This careful engagement with the texts of evolution enables us to see the broad points of its acceptance and adoption in the American scene this approach also highlights the ways in which writers reformers and others reconfigured Darwinian language to suit their individual purposes America's Darwin demonstrates the many ways in which writers and others fit themselves to a narrative of evolution whose dominant motifs are contingency and uncertainty Collectively the authors make the compelling case that the interpretation of evolutionary theory in the U S has always shifted in relation to prevailing cultural anxieties

Cultural Evolution Alex Mesoudi, 2024-05-31 Charles Darwin changed the course of scientific thinking by showing how evolution accounts for the stunning diversity and biological complexity of life on earth Recently there has also been increased interest in the social sciences in how Darwinian theory can explain human culture Covering a wide range of topics including fads public policy the spread of religion and herd behavior in markets Alex Mesoudi shows that human culture is itself an evolutionary process that exhibits the key Darwinian mechanisms of variation competition and inheritance This cross disciplinary volume focuses on the ways cultural phenomena can be studied scientifically from theoretical modeling to lab experiments archaeological fieldwork to ethnographic studies and shows how apparently disparate methods can complement one another to the mutual benefit of the various social science disciplines Along the way the book reveals how new insights arise from looking at culture from an evolutionary angle Cultural Evolution provides a thought provoking argument that Darwinian evolutionary theory can both unify different branches of inquiry and enhance understanding of human behavior

Was Hitler a Darwinian? Robert J. Richards, 2013-11-06 In tracing the history of Darwin's accomplishment and the

trajectory of evolutionary theory during the late nineteenth and early twentieth centuries most scholars agree that Darwin introduced blind mechanism into biology thus banishing moral values from the understanding of nature According to the standard interpretation the principle of survival of the fittest has rendered human behavior including moral behavior ultimately selfish Few doubt that Darwinian theory especially as construed by the master's German disciple Ernst Haeckel inspired Hitler and led to Nazi atrocities In this collection of essays Robert J Richards argues that this orthodox view is wrongheaded A close historical examination reveals that Darwin in more traditional fashion constructed nature with a moral spine and provided it with a goal man as a moral creature The book takes up many other topics including the character of Darwin's chief principles of natural selection and divergence his dispute with Alfred Russel Wallace over man's big brain the role of language in human development his relationship to Herbert Spencer how much his views had in common with Haeckel's and the general problem of progress in evolution Moreover Richards takes a forceful stand on the timely issue of whether Darwin is to blame for Hitler's atrocities Was Hitler a Darwinian is intellectual history at its boldest

The Mystery of Evolutionary Mechanisms Robert F. Shedinger, 2019-06-28 Is Darwinian evolution really the most successful scientific theory ever proposed or even the best idea anyone has ever had as Daniel Dennett once put it The Mystery of Evolutionary Mechanisms provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after Origin of Species a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life's origin and diversity The Mystery of Evolutionary Mechanisms calls for an embrace of mystery understood not as an abdication of the scientific quest for truth but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life
