evaluation of Darwin s concept of sexual selection tackles the subject from historical epistemological and theoretical

perspectives Contributions from a wealth of disciplines have been marshaled for this volume with key figures in behavioural

ecology philosophy and the history of science adding to its wide ranging relevance Updating the reader on the debate

currently live in behavioural ecology itself on the centrality of sexual selection and with coverage of developments in the field

of animal aesthetics the book details the current state of play while other chapters trace the history of sexual selection from

Darwin to today and inquire into the neurobiological bases for partner choices and the comparisons between the hedonic

brain in human and non human animals Welcome space is given to the social aspects of sexual selection particularly where

Darwin drew distinctions between eager males and coy females and rationalized this as evolutionary strategy Also explored

are the current definition of sexual selection as opposed to natural selection and its importance in today s biological research

and the impending critique of the theory from the nascent field of animal aesthetics As a comprehensive assessment of the
