Formalising Natural Languages with NooJ Victoria Khurshudian, Svetla Koeva, 2013-07-16. NooJ is a linguistic development environment that provides tools for linguists to construct linguistic resources that formalise a large gamut of linguistic phenomena: typography, orthography, lexicons for simple words, multiword units and discontinuous expressions, inflectional and derivational morphology, local structural and transformational syntax and semantics. For each resource that linguists create, NooJ provides parsers that can apply it to any corpus of texts in order to extract examples or counter examples to annotate matching sequences to perform statistical analyses etc. NooJ also contains generators that can produce the texts that these linguistic resources describe as well as a rich toolbox that allows linguists to construct, maintain, test, debug, accumulate and reuse linguistic resources. For each elementary linguistic phenomenon to be described, NooJ proposes a set of computational formalisms, the power of which ranges from very efficient finite state automata to very powerful Turing machines. This makes NooJ's approach different from most other computational linguistic tools that typically offer a unique formalism to their users. Since it was released in 2002, NooJ has been enhanced with new features every year. Linguists, researchers in the social sciences and more generally professionals who analyse texts have contributed to its development and participated in the annual NooJ conference. Since 2011 the European project Meta-Net CESAR has introduced new interest in NooJ as well as a new set of projects both in linguistics and in computer science. The present volume contains 18 articles selected from the 32 papers presented at the International NooJ 2012 Conference which was held from June 14th to 16th at the Institut National des Langues et Civilisations Orientales INALCO in Paris. These articles are organised in three parts: Vocabulary and Morphology contains five articles; Syntax and Semantics contains six articles; NooJ Applications contains six articles. In this volume we decided to add a new part: eight short papers that present prototype NooJ modules developed by graduate students and that could serve as bases for more ambitious projects.

Person Schemas and Maladaptive Interpersonal Patterns Mardi Jon Horowitz, 1991. This fresh exploration of the utility of person schemas for understanding interpersonal behavior and intrapsychic conflict brings together psychoanalytic researchers, social learning theorists and cognitive scientists. The contributors show that a fuller conceptualization of person schemas can begin to close the gap between psychodynamic and cognitive science research, providing new methods for understanding disorders of personality. There are many strengths in this volume beyond the clear presentation of the person schema as a concept linking

cognitive and psychodynamic perspectives Students will have an opportunity for comparison of perspectives while those working in the field will have an opportunity to follow the shift from concept to method to case application to theoretical context for understanding personality change Bertram J Cohler University of Chicago Contributors are Lorna Smith Benjamin Paul Crits Christoph Randolph L Cunningham Roy D Andrade Amy Demorest Mary Ewert Scott H Friedman Frances J Friedrich Jess H Ghannam Dianna Hartley Mardi J Horowitz John F Kihlstrom Peter H Knapp Lester Luborsky David Mark Thomas V Merluzzi Stephen E Palmer Carol Popp Peter Salovey Pamela Schaffler Jerome L Singer Charles H Stinson and Sandra L Tunis **Handbook, 1891-92** New York State Library.
