Desert Development Man And Technology In Sparselands:

Desert Development Yehuda Gradus, 2012-12-06 The fact that approximately one third of the world's land mass is arid desert may be congenial for the camel and the cactus but not for people Nevertheless well over half a billion people or 15% of the world's population live in arid desert areas If the world's population were distributed evenly over the land surface we would expect to find about 30% of the population inhabiting arid desert areas Does the fact that only 15% of the world's population live in an arid desert environment reflect the harshness of the environment Or is it a testimony to the adaptability and ingenuity of mankind Do we view the glass as half full Or half empty The contributors to *Desert Development Man and Technology in Sparselands* adopt the position that the cup is half full and in fact could be filled much more Indeed many arid desert zones do thrive with life and given appropriate technological development such areas could support even greater populations While the dire Malthusian prediction that rapid world population growth exceeds the carrying capacity of existent resource systems has gained popularity typified by the 1972 Club of Rome book *Limits to Growth* there is a growing body of serious work which rejects such pessimistic depletion models in favor of models which are mildly optimistic *The Arid Frontier* Hendrik J. Bruins, Harvey Lithwick, 2012-12-06 The arid frontier has been a challenge for humanity from time immemorial Drylands cover more than one third of the global land surface distributed over Africa Asia Australia America and Southern Europe Disasters may develop as a result of complex interactions between drought desertification and society Therefore proactive planning and interactive management including disaster coping strategies are essential in dealing with arid frontier development This book presents a conceptual framework with case studies in dryland development and management The option of a rational and ethical discourse for development that is beneficial for both the environment and society is emphasized avoiding extreme environmentalism and human destructionism combating both desertification and human livelihood insecurity Such development has to be based on appropriate ethics legislation policy proactive planning and interactive management Excellent scholars address these issues focusing on the principal interactions between people and dryland environments in terms of drought food land water renewable energy and housing Audience This volume will be of great value to all those interested in Dryland Development and Management professionals and policy makers in governmental international and non governmental organizations NGOs as well as researchers lecturers and students in Geography Environmental Management Regional Studies Development Anthropology Hazard and Disaster Management Agriculture and Pastoralism Land and Water Use African Studies and Renewable Energy Resources *Desert Regions* Boris A. Portnov, A. Paul Hare, 2012-12-06 Despite the common understanding of the importance of desert development in the contemporary world there are relatively few books published to date on this subject The books and collective volumes published in this field deal primarily with environmental and physical aspects of desert development such as soil agriculture vegetation water resources etc In contrast this book addresses the issues of regional and urban development in desert areas

which have not been given sufficient attention The present book is socially oriented It considers physical development of desert regions not as an end in itself but rather as an essential precondition for creating socially attractive and desirable environments for human settlement The book addresses the issues of desert development at three distinctive conceptual levels region urban environment and building and deals with both cold and hot deserts Approximately half of the chapters in this book are original contributions that have not been published elsewhere The remaining chapters fall into two groups 1 chapters which have been reprinted from various refereed journals and 2 chapters initially printed elsewhere and revised by their respective authors specifically for this collective volume In the former case permission to reproduce the material has been obtained from the respective copyright holders and the details of original publication and names of copyright holders are indicated in footnotes
