Design Dynamics Integrating Design And Technology:

Design Dynamics Joyce S. Hertzson, 2003 For courses in Basic 2 D Design from a contemporary perspective Conceptually rather than technically based and hands on in approach this unique introduction to two dimensional design shows students how to integrate technology and its creative applications with the more traditional realm of basic design Structured for the novice but with built in exercises for the computer literate it demonstrates how the computer may be used as a tool to enhance visual vocabulary in an increasingly digital and web connected culture Throughout students explore the fundamentals of design through a series of hands on projects that teach design concepts and the incidental technical skills of art making Students learn the basic principles that govern design have not changed but that the media and methods of approach used to make visual products have broadened to include digital technology

Design Technology for Heterogeneous Embedded Systems Gabriela Nicolescu, Ian O'Connor, Christian Piquet, 2012-02-02 Design technology to address the new and vast problem of heterogeneous embedded systems design while remaining compatible with standard More Moore flows i e capable of simultaneously handling both silicon complexity and system complexity represents one of the most important challenges facing the semiconductor industry today and will be for several years to come While the micro electronics industry over the years and with its spectacular and unique evolution has built its own specific design methods to focus mainly on the management of complexity through the establishment of abstraction levels the emergence of device heterogeneity requires new approaches enabling the satisfactory design of physically heterogeneous embedded systems for the widespread deployment of such systems Heterogeneous Embedded Systems compiled largely from a set of contributions from participants of past editions of the Winter School on Heterogeneous Embedded Systems Design Technology FETCH proposes a necessarily broad and holistic overview of design techniques used to tackle the various facets of heterogeneity in terms of technology and opportunities at the physical level signal representations and different abstraction levels architectures and components based on hardware and software in all the main phases of design modeling validation with multiple models of computation synthesis and optimization It concentrates on the specific issues at the interfaces and is divided into two main parts The first part examines mainly theoretical issues and focuses on the modeling validation and design techniques themselves The second part illustrates the use of these methods in various design contexts at the forefront of new technology and architectural developments
