**Five Ways to Make Architecture Political** Albena Yaneva, 2017-05-18 Five Ways to Make Architecture Political presents an innovative pragmatist agenda that will inspire new thinking about the politics of design and architectural practice Moving beyond conventional conversations about design and politics the book shows how recent developments in political philosophy can transform our understanding of the role of the architect It asks how when and under what circumstances can design practice generate political relations How can architectural design become more political Five central chapters which can be read alone or in sequence explore the answers to these questions Powerfully pragmatic in approach each presents one of the five ways to make architecture political and each is illustrated by case studies from a range of contemporary situations around the world We see how politics happens in architectural practice learn how different design technologies have political effects and follow how architects reach different publics trigger reactions and affect different communities worldwide Combining an accessible introduction to contemporary political concepts with a practical approach for a more political kind of practice this book will stimulate debate among students and theorists alike and inspire action in established and start up practices

**Architecture-Based Design of Multi-Agent Systems** Danny Weyns, 2010-06-01 Multi agent systems are claimed to be especially suited to the development of software systems that are decentralized can deal flexibly with dynamic conditions and are open to system components that come and go This is why they are used in domains such as manufacturing control automated vehicles and e commerce markets Danny Weyns book is

organized according to the postulate that developing multi agent systems is 95% software engineering and 5% multi agent systems theory He presents a software engineering approach for multi agent systems that is heavily based on software architecture with for example tailored patterns such as situated agent virtual environment and selective perception and on middleware for distributed coordination with programming abstractions such as views and roles Next he shows the feasibility and applicability of this approach with the development of an automated transportation system consisting of a number of automatic guided vehicles transporting loads in an industrial setting Weyns puts the development of multi agent systems into a larger perspective with traditional software engineering approaches With this he opens up opportunities to exploit the body of knowledge developed in the multi agent systems community to tackle some of the difficult challenges of modern day software systems such as decentralized control location awareness self adaption and large scale Thus his book is of interest for both researchers and industrial software engineers who develop applications in areas such as distributed control systems and mobile applications where such requirements are of crucial importance
