Intelligent Systems in Design and Manufacturing Cihan H. Dagli, Andrew Kusiak, 1994 Focuses on solutions to problems in design and manufacturing engineering presenting a variety of problem solving approaches and practical examples Covers neural networks and other artificial intelligence tools computational models for conceptual design desirable functionalities of intelligent CA **Soft Computing and Intelligent Systems Design** Fakhreddine O. Karray, Clarence W. De Silva, 2004

Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate *Mathematical Reviews*, 2005 Mathematical Methods for Knowledge Discovery and Data Mining
