*American Life*, 1980 The Building Research Advisory Board BRAB convened its 1977 Building Futures Forum on the  
 Importance of the Built Environment to the Quality of American Life to call attention to the complex relationship between the  
 man built environment and individual and societal health and well being to identify issues that can be expected to have a  
 major impact on the built environment and the building community in the years ahead and to explore alternative approaches  
 for improving the quality of American life through modification development and application of building technology In  
 planning the Forum BRAB and its Technology Assessment and Utilization TAU group recognized that the vast majority of  
 Americans spend the greatest portion of their lives in the built or enclosed environment i.e. homes offices factories and  
 schools but that most of the attention given to improving the quality of life by creating a better environment has been  
 concentrated on the natural or outdoor environment With this in mind the 1977 Forum was organized to permit a broad  
 group of specialists in many disciplines to share their expertise and to devote their energy to the development of an agenda  
 of feasible and high priority research and action concerning four major topics future settlement patterns energy utilization  
 and building technology health and human development and policy demands on the building community **Which Degree?**
