Dean,Daniel Voss,2006-04-06 Our initial motivation for writing this book was the observation from various students that the subject of design and analysis of experiments can seem like a bunch of miscellaneous topics Webelievethattheidenti

cation of the objectives of the experiment and the practical considerations governing the design form the heart of the subject matter and serve as the link between the various analytical techniques. We also believe that learning about design and analysis of experiments is best achieved by the planning, running and analyzing of a simple experiment. With these considerations in mind we have included throughout the book the details of the planning stage of several experiments that were run in the course of teaching our classes. The experiments were run by students in statistics and the applied sciences and are sufficiently simple that it is possible to discuss the planning of the entire experiment in a few pages and the procedures can be reproduced by readers of the book. In each of these experiments we had access to the investigators' actual report including the difficulties they came across and how they decided on the treatment factors, the needed number of observations and the layout of the design. In the later chapters we have included details of a number of published experiments. The outlines of many other student and published experiments appear as exercises at the ends of the chapters. Complementing the practical aspects of the design are the statistical aspects of the analysis. We have developed the theory of estimable functions and analysis of variance with some care but at a low mathematical level.

Designing and Space Planning for Libraries Aaron Cohen, Elaine Cohen, 1979. Based on the belief that the planning process for any change in the library depends on considering aesthetic, functional and behavioral elements, an architect and a behaviorist describe factors involved in each.
