Informatics Research Peter Forbrig, Horst Günther, 2010-09-21 The conference series BIR Business Informatics Research was established 10 years ago in Rostock as an initiative of researchers from Swedish and German universities. The objective was to create a global forum where researchers in business informatics seniors as well as juniors could meet, collaborate and change ideas. Over the years BIR has matured into a series of international conferences typically organized in the Baltic Sea region including Norway and Iceland. A steering committee ensures the high quality of the BIR proceedings. We are very proud that this year an international and very well known editor has agreed to publish selected papers of the conference. The interest in the conference in terms of submissions and participation has steadily increased over the years. This year we received 53 contributions among which 14 submissions were accepted as long papers and 4 as short papers. A few additional contributions were invited for presentation at the conference. The selection was carefully carried out by an International Program Committee. The result is a set of interesting and stimulating papers that address important issues such as knowledge management, ontologies, models, workflow specifications, databases and OLAP. The conference was opened by an invited technical talk by Dr. Klaus Brunnstein from The University of Hamburg who discussed the topic 'The Information Society on the Way to Web 3.0: Perspectives, Opportunities and Risks' which is challenging for all of us. **Handbook of Research in Mobile**

Enhancing Business Continuity and IT Capability Nijaz Bajgorić, Lejla Turulja, Semir Ibrahimović, Amra Alagić, 2020-12-01 Enterprise servers play a mission-critical role in modern computing environments, especially from a business continuity perspective. Several models of IT capability have been introduced over the last two decades. Enhancing Business Continuity and IT Capability: System Administration and Server Operating Platforms proposes a new model of IT capability. It presents a framework that establishes the relationship between downtime on one side and business continuity and IT capability on the other side, as well as how system administration and modern server operating platforms can help in improving business continuity and IT capability. This book begins by defining business continuity and IT capability and their importance in modern business, as well as by giving an overview of business continuity, disaster recovery, planning, contingency planning, and business continuity maturity models. It then explores modern server environments and the role of system administration in ensuring higher levels of system availability, system scalability, and business continuity. Techniques for enhancing availability and business continuity also include Business Impact Analysis.

Assessing the downtime impact Designing an optimal business continuity solution IT auditing as a process of gathering data and evidence to evaluate whether the company's information systems infrastructure is efficient and effective and whether it meets business goals The book concludes with frameworks and guidelines on how to measure and assess IT capability and how IT capability affects a firm's performances Cases and white papers describe real world scenarios illustrating the concepts and techniques presented in the book Computers Larry E. Long, Nancy Long, 1986 *Network World*, 1993-07-19 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce **Computer Mediated Communication and the Online Classroom: Overview and perspectives** Zane L. Berge, Mauri P. Collins, 1995 This text the first in a three volume set provides an overview and perspective on computer mediated communication CMC in education The three volumes in this set are conceived as handbooks for individual teachers to help them implement computer mediated communication CMC in their classrooms The authors avoid as far as possible discussing hardware or software specifics concentrating instead on content pedagogy instructional design and the mechanics of using CMC All three volumes are written by and for practitioners who have bought into the value of CMC and now want to know how they can use it in their educational setting
