Descartes On Polyhedra A Study Of The De Solidorum Elementis:

Descartes on Polyhedra P. J. Federico, 2012-12-06 The present essay stems from a history of polyhedra from 1750 to 1866 written several years ago as part of a more general work not published So many contradictory statements regarding a Descartes manuscript and Euler by various mathematicians and historians of mathematics were encountered that it was decided to write a separate study of the relevant part of the Descartes manuscript on polyhedra The contemplated short paper grew in size as only a detailed treatment could be of any value After it was completed it became evident that the entire manuscript should be treated and the work grew some more The result presented here is I hope a complete accurate and fair treatment of the entire manuscript While some views and conclusions are expressed this is only done with the facts before the reader who may draw his or her own conclusions I would like to express my appreciation to Professors H S M Coxeter Branko Grünbaum Morris Kline and Dr Heinz Jürgen Hess for reading the manuscript and for their encouragement and suggestions I am especially indebted to Dr Hess of the Leibniz Archiv for his assistance in connection with the manuscript I have been greatly helped in preparing the translation of the manuscript by the collaboration of a Latin scholar Mr Alfredo De Barbieri The aid of librarians is indispensable and I am indebted to a number of them in this country and abroad for locating material and supplying copies *Descartes on Polyhedra* Pasquale Joseph Federico, 1982-01-01 **Descartes's**

Mathematical Thought C. Sasaki, 2013-03-09 Covering both the history of mathematics and of philosophy Descartes's Mathematical Thought reconstructs the intellectual career of Descartes most comprehensively and originally in a global perspective including the history of early modern China and Japan Especially it shows what the concept of mathesis universalis meant before and during the period of Descartes and how it influenced the young Descartes In fact it was the most fundamental mathematical discipline during the seventeenth century and for Descartes a key notion which may have led to his novel mathematics of algebraic analysis *Descartes's Method* Tarek Dika, Tarek R. Dika, 2023 Ren Descartes revolutionized the method of intellectual inquiry Tarek Dika presents a systematic interpretation and defense of Descartes method and its efficacy and demonstrates the fruits of this interpretation applied to metaphysics optics and mathematics

Boston Studies in the Philosophy of Science Chikara Sasaki, 2003 *Four Colors Suffice* Robin J. Wilson, 2002 On October 23 1852 Professor Augustus De Morgan wrote a letter to a colleague unaware that he was launching one of the most famous mathematical conundrums in history one that would confound thousands of puzzlers for more than a century This is the amazing story of how the map problem was solved The problem posed in the letter came from a former student What is the least possible number of colors needed to fill in any map real or invented so that neighboring counties are always colored differently This deceptively simple question was of minimal interest to cartographers who saw little need to limit how many colors they used But the problem set off a frenzy among professional mathematicians and amateur problem solvers among them Lewis Carroll an astronomer a botanist an obsessive golfer the Bishop of London a man who set his watch only once a

year a California traffic cop and a bridegroom who spent his honeymoon coloring maps In their pursuit of the solution mathematicians painted maps on doughnuts and horseshoes and played with patterned soccer balls and the great rhombicuboctahedron It would be more than one hundred years and countless colored maps later before the result was finally established Even then difficult questions remained and the intricate solution which involved no fewer than 1 200 hours of computer time was greeted with as much dismay as enthusiasm Providing a clear and elegant explanation of the problem and the proof Robin Wilson tells how a seemingly innocuous question baffled great minds and stimulated exciting mathematics with far flung applications This is the entertaining story of those who failed to prove and those who ultimately did prove that four colors do indeed suffice to color any map **Descartes's Mathematical Thought** Chikara Sasaki,1989

Architectonics of Humanism Lionel March,1998-12-08 Reinterpreting the architectural principles of the Renaissance period This book presents a fresh viewpoint on the use of symmetry and proportion in Alberti and Palladio with the help of new illustrations and examples Covering the evolution of the Renaissance tradition into the twentieth century this book offers a new evaluation which veers from Le Corbusier and the French school and moves toward the continuation and transformation in the Viennese and Chicago practices exemplified by Frank Lloyd Wright and the American school Lionel March Los Angeles CA is a practicing architect and an avid follower of the Modernist tradition in architecture He also teaches at the Center for Medieval and Renaissance Studies at UCLA *Mathematical Astronomy in Copernicus's De Revolutionibus* Noel M. Swerdlow,1984 Mathematical Astronomy in Copernicus' De Revolutionibus N.M. Swerdlow,O. Neugebauer,1984-07-02 When I first laid out the framework for A History of Ancient Mathematical Astronomy I intended to carry the discussion down to the last applications of Greek astronomical methodology i e Copernicus Brahe and Kepler But as the work proceeded it became evident that this plan was much too ambitious and so I decided to terminate my History with late antiquity well before Islam Nevertheless I did not discard the running commentary that I had prepared when studying De revolutionibus in its relation to the methodology of the Almagest Only recently E S Kennedy and his collaborators had opened access to the Maragha School mainly Ibn ash Shalir revealing close parallels to Copernicus s procedures Accordingly it seemed useful to make available a modern analysis of De revolutionibus and thus in 1975 I prepared for publication Notes on Copernicus In the meantime however Noel Swerdlow also starting from Greek astronomy not only extended his work into a deep analysis of De revolutionibus but also systematically investigated its sources and predecessors Peurbach Regiomontanus etc I was aware of these studies through his publications as well as from numerous conversations on the subject at The Institute for Advanced Study and at Brown University It became clear to me that my own investigations lay at too superficial a level and I therefore withdrew my manuscript and suggested to Swerdlow that he undertake a thoroughgoing revision and amplification of my Notes His acceptance of my proposal initiated the present publication

Jamil Ragep, 1993-07-16 I was introduced to Tusi and his Tadhkira some 19 years ago That first meeting was neither happy nor auspicious My graduate student notes from the time indicate a certain level of confusion and frustration I seem to have had trouble with such words as tadwīr epicycle which was not to be found in my standard dictionary and with the concept of solid sphere astronomy which when found was pooh poohed in the standard sources I had another even more decisive reaction boredom Only the end of the term brought relief and I was grateful to be on to other more exciting aspects of the history of science A few years later I found myself thanks to fellowships from Fulbright Hays and the American Research Center in Egypt happily immersed in the manuscript collections of Damascus Aleppo and Cairo Though I had intended to work on a topic in the history of mathematics I was drawn perhaps inevitably to a certain type of astronomical writing falling under the rubric of hay'a At first this fascination was based on sheer numbers that so many medieval scientists could have written on such a subject must mean something I

told myself I was in a sociological mode at the time
