Laboratory Epistemologies Jenny Boulboulé, 2024-10-11 In Laboratory Epistemologies A Hands On Perspective Jenny Boulboulé examines the significance of hands on experiences in contemporary life sciences laboratories Addressing the relationship between contemplation and manipulation in epistemology Boulboulé combines participant observations in molecular genetics labs and microbiological cleanrooms with a longue durée study of the history and philosophy of science

She radically rereads Descartes's key epistemological text *Meditations on First Philosophy* reframing the philosopher as a hands-on knowledge maker. With this reading Boulboull subverts the pervasive modern conception of the disembodied knower and puts the hands-on experimenter at the heart of life sciences research. In so doing she contributes a theoretical model for understanding how life processes on cellular and molecular levels are manually produced in today's techno-scientific spaces. By reassessing the Cartesian legacy and arguing that epistemology should be grounded in the standpoint of a hands-on practitioner, Boulboull offers the philosophical and historical foundation to understand and study contemporary life sciences research as multisensory embodied practices.

Wikipedia contributors, **Discourse on Method and Related Writings** René Descartes, 2000-03-01. It is not enough to have a good mind; it is more important to use it well. René Descartes was a central figure in the scientific revolution of the seventeenth century. In his *Discourse on Method*, he outlined the contrast between mathematics and experimental sciences and the extent to which each one can achieve certainty. Drawing on his own work in geometry, optics, astronomy, and physiology, Descartes developed the hypothetical method that characterizes modern science, and this soon came to replace the traditional techniques derived from Aristotle. Many of Descartes' most radical ideas, such as the disparity between our perceptions and the realities that cause them, have been highly influential in the development of modern philosophy. This edition sets the *Discourse on Method* in the wider context of Descartes' work with the *Rules for Guiding One's Intelligence* in *Searching for the Truth*. 1628 extracts from *The World*, 1633, and selected letters from 1636-9. A companion volume, *Meditations and Other Metaphysical Writings*, is also published in Penguin Classics. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.

Meditations and Other Metaphysical Writings René Descartes, 1999-09-01. One of the foundation stones of modern philosophy, Descartes was prepared to go to any lengths in his search for certainty, even to deny those things that seemed most self-evident. In his *Meditations* of 1641 and in the *Objections and Replies* that were included with the original publication, he set out to dismantle and then reconstruct the idea of the individual self and its existence. In doing so, Descartes developed a language of subjectivity that has lasted to this day, and he also took his first steps towards the view that would eventually be expressed in the epigram *Cogito ergo sum*. I think, therefore I am, one of modern philosophy's most famous and most fiercely contested claims. The first part of a two-volume edition of Descartes' works in Penguin Classics, the second of which is *Discourse on Method and Related Writings*. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and
