Machine Vision Algorithms and Applications Carsten Steger, Markus Ulrich, Christian Wiedemann, 2018-03-12 Die zweite Auflage dieses erfolgreichen Lehrbuchs zum maschinellen Sehen ist vollständig aktualisiert, bearbeitet und erweitert um die Entwicklungen der vergangenen Jahre auf den Gebieten der Bilderfassung, Algorithmen des maschinellen Sehens und dessen Anwendungen. Zu berücksichtigten hinzugekommen sind insbesondere neue Kameratechniken und Schnittstellen 3D Sensorik und Technologie 3D Objekterkennung und 3D Bildrekonstruktion. Die Autoren folgen weiterhin dem Ansatz, soviel Theorie wie nötig, soviel Anwendungsbezug wie möglich. Alle Beispiele basieren auf der aktuellen Version der Software HALCON. Von der nach Registrierung auf der Autorenwebseite eine Testversion erhältlich ist. *Digital Image Processing Methods* Dougherty, 2020-08-26 This unique reference presents in depth coverage of the latest methods and applications of digital image processing, describing various computer architectures ideal for satisfying specific image processing demands.

Invariant Recognition of Visual Objects Evgeniy Bart, Jay Hegd , This Research Topic will focus on how the visual system recognizes objects regardless of variations in the viewpoint, illumination, retinal size, background, etc. Contributors are encouraged to submit articles describing novel results, models, viewpoints, perspectives, and/or methodological innovations relevant to this topic. The issues we wish to cover include, but are not limited to, perceptual invariance under one or more of the following types of image variation: Object shape, Task Viewpoint (from the translation and rotation of the object relative to the viewer), Illumination (shading and shadows), Degree of occlusion, Retinal size, Color, Surface texture, Visual context (including background clutter and crowding), Object motion (including biological motion). Examples of questions that are particularly interesting in this context include, but are not limited to: Empirical characterizations of properties of invariance: Does invariance always exist? How wide is its range and how strong is the tolerance to viewing conditions within this range? Invariance in naïve vs. experienced subjects: Is invariance built in or learned? How can it be learned under which conditions and how effectively? Is it learned incidentally or are specific task and reward structures necessary for learning? How is generalizability and transfer of learning related to the generalizability of invariance of perception? Invariance during inference: Are there conditions (e.g., fast presentation time or otherwise resource constrained recognition) when invariance breaks? What are some plausible computational or neural mechanisms by which invariance could be achieved? *Web Intelligence: Research and Development* Ning Zhong, Yiyu Yao, Jiming Liu, Setsuo Ohsuga, 2003-06-30 This book constitutes the refereed proceedings of the First Asia Pacific Conference on Web Intelligence (WI 2001) held in Maebashi City, Japan, in October 2001. The 28 revised full papers and 45 revised short papers presented were carefully reviewed and selected from 153 full-length paper submissions. Also included are an introductory survey and six invited presentations. The book offers topical sections on Web information systems, environments and foundations, Web human media engineering, Web information management, Web information retrieval, Web agents, Web mining and farming, and Web-based applications. **Three-Dimensional Object**

Recognition Systems A.K. Jain, BTech PhD, P.J. Flynn, 1993-05-05 The design and construction of three dimensional 3 D object recognition systems has long occupied the attention of many computer vision researchers The variety of systems that have been developed for this task is evidence both of its strong appeal to researchers and its applicability to modern manufacturing industrial military and consumer environments 3 D object recognition is of interest to scientists and engineers in several different disciplines due to both a desire to endow computers with robust visual capabilities and the wide applications which would benefit from mature and robust vision systems However 3 D object recognition is a very complex problem and few systems have been developed for actual production use most existing systems have been developed for experimental use by researchers only This edited collection of papers summarizes the state of the art in 3 D object recognition using examples of existing 3 D systems developed by leading researchers in the field While most chapters describe a complete object recognition system chapters on biological vision sensing and early processing are also included The volume will serve as a valuable reference source for readers who are involved in implementing model based object recognition systems stimulating the cross fertilisation of ideas in the various domains The variety of topics on Image Communication is so broad that no one can be a specialist in all the topics and the whole area is beyond the scope of a single volume while the requirement of up to date information is ever increasing This new closed end book series is intended both as a comprehensive reference for those already active in the area of Image Communication as well as providing newcomers with a foothold for commencing research Each volume will comprise a state of the art work on the editor s author s area of expertise containing information until now scattered in many journals and proceedings On Recognizing and Tracking 3D Curved Objects from 2D Images Jin-Long James Chen, 1996 Invariant Object Recognition Based on Elastic Graph Matching Raymond S.
