    Design Methods for Reactive Systems Roel Wieringa,2003 This book provides a framework for software design that shows where the techniques and approaches of design methods for software systems fit in It discusses three methods in detail and demonstrates how to pick techniques from each of them It also shows how to follow problem solving steps that focus on the design problem rather than on the method   **Advanced Information Systems Engineering** Klaus R. Dittrich,Andreas Geppert,Moira C. Norrie,2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the p sentation and exchange of research results and practical experiences within the eld of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Int laken located near the three famous Swiss mountains the Eiger M onch and Jungfrau The rst two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The p conference tutorials were on the themes of e business models and XML appli tion development The main conference program included three invited speakers two tuto als and a panel discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presentersanopportunitytoreportonanddiscussexperiencesandinvestigations on the use of methods and technologies in practice Weextendourthankstothemembersoftheprogramcommitteeandallother referees without whom such conferences would not be possible The program committee whose members came from 20 di erent countries selected 27 hi quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems   Model Driven Engineering Languages and Systems Andy Schürr,Bran Selic,2009-09-15 The pioneering organizers of the rst UML workshop in Mulhouse France inthe summerof1998couldhardlyhaveanticipatedthat in littleoveradecade theirinitiativewouldblossomintotoday shighlysuccessfulMODELSconference series the premier annual gathering of researchersand practitioners focusing on a very important new technical discipline model based software and system engineering This expansion is of course a direct consequence of the growing signi cance and success of model based methods in practice The conferences have contributed greatly to the heightened interest in the eld attracting much young talent and leading to the gradualemergence of its correspondingscienti c and engineering foundations The proceedings from the MODELS conferences are one of the primary references for anyone interested in a more substantive study of the domain The 12th conference took place in Denver in the USA October 4 9 2009 along with numerous satellite workshops and tutorials as well as several other related scienti c gatherings The conference was exceptionally fortunate to have three

eminent invited keynote speakers from industry Stephen Mellor Larry Constantine and Grady Booch **Come, Let's Play** David Harel,Rami Marelly,2012-12-06 This book does not tell a story Instead it is about stories Or rather in technical terms it is about scenarios Scenarios of system behavior It con centrates on reactive systems be they software or hardware or combined computer embedded systems including distributed and real time systems We propose a different way to program such systems centered on inter object scenario based behavior The book describes a language two tech niques and a supporting tool The language is a rather broad extension of live sequence charts LSCs the original version of which was proposed in 1998 by W Damm and the first listed author of this book The first of the two techniques called play in is a convenient way to play in scenario based behavior directly from the system s graphical user interface QUI The second technique play out makes it possible to execute or play out the behavior on the QUI as if it were programmed in a conventional intra object state based fashion All this is implemented in full in our tool the Play Engine The book can be viewed as offering improvements in some ofthe phases of known system development life cycles e g requirements capture and anal ysis prototyping and testing However there is a more radical way to view the book namely as proposing an alternative way to program reactivity which being based on inter object scenarios is a lot closer to how people think about systems and their behavior **Model-Based Methodologies for Pervasive and Embedded Software** Ricardo J. Machado,Rita Suzana Maciel,Julia Rubin,Goetz Botterweck,2013-11-18 This book constitutes the thoroughly refereed post conference proceedings of the 8th International Workshop on Model Based Methodologies for Pervasive and Embedded Software MOMPES 2012 held in Essen Germany in September 2012 The 7 revised full papers presented together with 1 short papers were carefully reviewed and selected from 16 submissions The papers cover a large spectrum of topics including model driven engineering model analysis runtime verification modeling of reactive systems variability modeling and domain specific languages **SDL 2011: Integrating System and Software Modeling** Iulian Ober,Ileana Ober,2011-12-03 This book constitutes the thoroughly refereed post conference proceedings of the 15th International SDL Forum SDL 2011 held in Toulouse France in July 2011 The 16 revised full papers presented together were carefully reviewed and selected for inclusion in the book The papers cover a wide range of topics such as SDL and related languages testing and services and components to a wide range presentations of domain specific languages and applications going from use maps to train station models or user interfaces for scientific dataset editors for high performance computing **Advanced Information Systems Engineering** ,2003 **Dr. Dobb's Journal** ,2004 Application and Theory of Petri Nets ,2003 *Web Engineering* ,2004 *Conceptual Modeling--ER ...* ,2004 **Principles and Applications of Distributed Event-based Systems** Annika Hinze,Alejandro P. Buchmann,2010 This book showcases event based systems in real world applications providing professionals researchers and students in systems design with a rich compendium of latest applications in the field Provided by publisher **Modeling Reactive Systems with Statecharts** David Harel,Michal

Politi,1998 The book provides a detailed description of a set of languages for modelling reactive systems which underlies the STATEMATE toolset The approach is dominated by the language of Statecharts used to describe behavior combined Activity charts for describing activities i e the functional building blocks capabilities or objects and the data that flows between them These two languages are used to develop a conceptual model of the system which can be combined with the system s physical or structural model described in a third language Module charts The three languages are highly diagrammatic in nature constituting full fledged visual formalisms complete with rigorous semantics They are accompanied by a Data Dictionary for specifying additional parts of the model that are textual in nature **The Unified Modeling Language** ,1999 **Proceedings, 11th IEEE International Conference and Workshop on the Engineering of Computer-Based Systems** Vaclav Dvorak,Miroslav Sveda,2004 **Thông báo sách mới** ,2003 **Books In Print 2004-2005** Ed Bowker Staff,Staff Bowker, Ed,2004 **Classical and Object-oriented Software Engineering with UML and C++** Stephen R.
