

Active Site Directed Irreversible Enzyme Inhibition

In this type of irreversible catalysis, inhibitor covalently binds to the active site on the enzyme thereby preventing the attachment of the substrate to it. As the inhibitor permanently attaches to the enzyme, the enzyme is unable to catalyse any reactions.

Disturbances of haemostasis and thromboembolic disorders still constitute a great problem in clinical practice Increasing insight into the mechanism of blood coagulation has led to more effective therapy and prophylaxis Particularly the understanding of the biochemistry of fibrinolysis has provided possibilities for the pharmacological interference of these processes which has resulted in effective haemostatic agents and useful antithrombotic ones The development of antifibrinolytics for interfering with pathological fibrinolytic processes is nearly complete and has led to the development of drugs essential to the therapy of hyperfibrinolytic bleeding The search for fibrinolytics for dissolving intravascular thrombi

has led to highly effective compounds This development is still under way and promising results are hoped Spontaneous dissolution of blood clots is a phenomenon which was described a century ago First investigations of this process assured that there is in the organism a system capable of removing the fibrin which is formed during blood coagulation after it has fulfilled its physiological function This fibrinolytic system is specifically adapted to the degradation of insoluble fibrin into soluble degradation products In the past 30 years thorough investigation of this system has clarified the fibrinolytic process its physiological role and its meaning as a pathogenetic principle A good knowledge of these processes is required for an understanding of the effects and side effects of fibrinolytics and antifibrinolytics which comprise the basis of methods for the detection of fibrinolytic processes in the organism and of the control of therapy with these drugs *Chemistry and Industry*, 1979 INTERNATIONAL SYMPOSIUM ENZYMATIC ASPECTS OF METABOLIC REGULATION, *The Publishers' Trade List Annual*, 1978 **Annals of the New York Academy of Sciences** New York Academy of Sciences, 1971 Records of meetings 1808 1916 in v 11 27 **The Biochemical Mode of Action of Pesticides** John Roger Corbett, 1974 Respiration photosynthesis Insecticides acting on the nervous system Growth biosynthesis non specific action unknown conclusions
