

Earthquake resistant buildings

In order to withstand the impact of an earthquake, a building must redistribute its shockwaves. Several design features can handle the side-to-side forces emitted by a quake

Pendulum power: Large ball on steel cables connects to hydraulic system. When building begins to sway, ball acts as pendulum

Window shutters:
Prevent falling glass

Shear walls: High quality concrete reinforced with steel bars

Cross braces: Diagonal supports resist swaying forces

Base isolation: When flexible foundation moves, isolators absorb seismic waves to prevent them from travelling through building

Reinforced steel discs

Lead core

Discs separated by rubber

Rubber cover
