Design Of Intelligent Agents A Layered Approach:

The Design of Intelligent Agents Jörg P. Müller,1996-11-27 This monograph presents a comprehensive state of the art survey on approaches to the design of intelligent agents On the theoretical side the author identifies a set of general requirements for autonomous interacting agents and provides an essential step towards understanding the principles of intelligent agents On the practical side the novel agent architecture InterRaP is introduced the detailed description and evaluation of this architecture is an ideal guideline and case study for software engineers or researchers faced with the task of building an agent system The book uniquely bridges the gap between theory and practice it addresses active and novice researchers as well as practitioners interested in applicable agent technology *Intelligent Agent Technology* Ning Zhong,2001 This volume is an attempt to capture the essence of the state of the art of intelligent agent technology and to identify the new challenges and opportunities that it is or will be facing The most important feature of the volume is that it emphasizes a multi faceted holistic view of this emerging technology from its computational foundations in terms of models methodologies and tools for developing a variety of embodiments of agent based systems to its practical impact on tackling real world problems

Intelligent Agents III. Agent Theories, Architectures, and Languages Michael J. Wooldridge,Nick Jennings,1997-01-22 Intelligent agents are computer systems

that are capable of flexible autonomous action in dynamic typically multi agent domains Over the past few years the computer science community has begun to recognise that the technology of intelligent agents provides the key to solving a range of complex software application problems for which traditional software engineering tools and techniques offer no solution This book the third in a series represents the state of the art in the science of agent systems It is based on papers presented at the 3rd workshop on Agent Theories Architectures and Languages ATAL 96 held in conjunction with the European Conference on Artificial Intelligence ECAI 96 in Budapest Hungary in August 1996 It is essential reading for anyone interested in this vital new technology

Agent-Based Defeasible Control in Dynamic Environments John-Jules Ch. Meyer, Jan Treur, 2013-03-09 This volume the 7th volume in the DRUMS Handbook series is part of the aftermath of the successful ESPRIT project DRUMS Defeasible Reasoning and Uncertainty Management Systems which took place in two stages from 1989 1996 In the second stage 1993 1996 a work package was introduced devoted to the topics Reasoning and Dynamics covering both the topics of Dynamics of Reasoning where reasoning is viewed as a process and Reasoning about Dynamics which must be understood as pertaining to how both designers of and agents within dynamic systems may reason about these systems The present volume presents work done in this context extended with some work done by outstanding researchers outside the project on related issues While the previous volume in this series had its focus on the dynamics of reasoning processes the present volume is more focused on reasoning about dynamics viz how human and artificial agents reason about systems in dynamic environments in order to control them In particular we consider modelling frameworks and generic agent models for modelling these dynamic systems and formal approaches to these systems such as logics for agents and formal means to reason about agent based and compositional systems and action change more in general We take this opportunity to mention that we have very pleasant recollections of the project with its lively workshops and other meetings with the many sites and researchers involved both within and outside our own work package
