Considerations for analysis and design of reinforced concrete structures Requirements for strength and serviceability
Principles of the strength design method Design and detailing requirements for beams one way slabs two way slabs columns
walls and foundations *Development and Implementation of Lightweight Concrete Mixes for KDOT Bridge Applications*
Sarah Jo Grotheer, 2009 As of 2005 23% of the bridges in the Kansas infrastructure are classified as structurally deficient or
functionally obsolete according to the ASCE Infrastructure Report Card ASCE 2008 One alternative to replacing the entire
bridge structure is replacing only the superstructure with lightweight concrete This option is more economical for city county
and state governments alike Replacing the superstructure with lightweight concrete can oftentimes allow the bridge rating to
be upgraded to higher load capacities or higher traffic volumes Furthermore lightweight concrete can be used initially in a
bridge deck to provide reduced weight and a lower modulus of elasticity therefore lower cracking potential The Kansas
Department of Transportation is interested in the potential benefits of using lightweight aggregate concrete in Kansas bridge
decks and prestressed bridge girders This research project used three types of lightweight aggregate to develop lightweight
concrete mixtures for a bridge deck and for prestressed bridge girders Two of the lightweight aggregates were expanded
shale obtained locally from the Buildex Company One deposit was located in Marquette Kansas and the other in New Market
Missouri The third lightweight aggregate source was expanded slate obtained from the Stalite Company in North Carolina
Aggregate properties including absorption gradation and L A Abrasion were evaluated Over 150 lightweight concrete
mixtures were created and tested and several mix design variables such as water to cement ratio cement content and coarse
to fine aggregate ratio were evaluated From these results optimized bridge deck and optimized prestressed concrete
mixtures were developed for each type of lightweight aggregate Special concerns for lightweight aggregate concrete are
addressed These optimized concrete mixtures were then tested for KDOT acceptability standards for the concrete properties
of compressive strength tensile strength modulus of elasticity freeze thaw resistance permeability alkali silica reactivity
drying shrinkage and autogenous shrinkage All concrete mixtures performed satisfactorily according to KDOT standards In

addition an internal curing effect due to the moisture content of the lightweight aggregate was observed during the autogenous shrinkage test Design and Control of Concrete Mixtures Steven H.
