Elliott, 2013-10-24 Game Studies is a rapidly growing area of contemporary scholarship yet volumes in the area have tended

to focus on more general issues With Playing with the Past game studies is taken to the next level by offering a specific and detailed analysis of one area of digital game play the representation of history The collection focuses on the ways in which gamers engage with play with recreate subvert reverse and direct the historical past and what effect this has on the ways in which we go about constructing the present or imagining a future What can World War Two strategy games teach us about the reality of this complex and multifaceted period Do the possibilities of playing with the past change the way we understand history If we embody a colonialist s perspective to conquer primitive tribes in Colonization does this privilege a distinct way of viewing history as benevolent intervention over imperialist expansion The fusion of these two fields allows the editors to pose new questions about the ways in which gamers interact with their game worlds Drawing these threads together the collection concludes by asking whether digital games which represent history or historical change alter the way we today understand history itself

Design for the Changing Educational Landscape Andrew Harrison, Les Hutton, 2013-10-15 The whole landscape of space use is undergoing a radical transformation In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide the rise of distributed space In the learning environment the social political economic and technological changes responsible for this shift have been further compounded by constantly developing theories of learning and teaching and a wide acceptance of the importance of learning as the core of the community resulting in the blending of all aspects of learning into one seamless experience This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces real and virtual that now accommodate the experience of learning and provide pointers towards the creation and design of learning centred communities Part 1 looks at the entire learning universe as it now stands tracks the way in which its constituent parts came to occupy their role assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform It shows that what is required is innovation within the spaces and integration between them Part 2 finds many examples of innovation in evidence across the world in schools the higher and further education campus and in business and cultural spaces but an almost total absence of integration Part 3 offers a model that redefines the learning landscape in terms of learning outcomes mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome at the most appropriate scale By encouraging stakeholders to creating an events based rather than space based identity the book hopes to point the way to a fully integrated learning landscape a learning community

The RF and Microwave Handbook Mike Golio, 2000-12-20 The recent shift in focus from defense and government work to commercial wireless efforts has caused the job of the typical microwave engineer to change dramatically The modern microwave and RF engineer is expected to know customer expectations market trends manufacturing technologies and factory models to a degree that is unprecedented in the

The Entrepreneurial University Lene Foss, David Gibson, 2015-05-22 Global recessions and structural economic shifts are motivating government

and business leaders worldwide to increasingly look to their universities to stimulate regional development and to contribute to national competitiveness. The challenge is clear and the question is pressing: How will universities respond? This book presents in depth case narratives of ten universities from Norway, Finland, Sweden, UK and the U S that have overcome significant challenges to develop programs and activities to commercialize scientific research, launch entrepreneurial degree programs, establish industry partnerships and build entrepreneurial cultures and ecosystems. The universities are quite diverse, large and small, teaching and research focused, internationally recognized and relatively new, located in major cities and in emerging regions. Each case narrative describes challenges overcome, actions taken and resulting accomplishments. This volume will be of interest to policymakers and university administrators as well as researchers and students interested in how different programs and activities can promote university entrepreneurship while contributing to economic growth in developed and developing economies. *Enterprise Interoperability IV* Keith Popplewell, Jenny Harding, Chalmeta

Ricardo, Raul Poler, 2010-05-30. Enterprise Interoperability is the ability of an enterprise or organisation to work with other enterprises or organisations without special effort. It is now recognised that interoperability of systems and thus sharing of information is not sufficient to ensure common understanding between enterprises. Knowledge of information meaning and understanding of how it is to be used must also be shared if decision makers distributed between those enterprises in the network want to act consistently and efficiently. Industry's need for Enterprise Interoperability has been one of the significant drivers for research into the Internet of the Future. EI research will embrace and extend contributions from the Internet of Things and the Internet of Services and will go on to drive the future needs for Internets of People, Processes and Knowledge.

Springer Handbook of Augmented Reality Andrew Yeh Ching Nee, Soh Khim Ong, 2023-01-01. The Springer Handbook of Augmented Reality presents a comprehensive and authoritative guide to augmented reality (AR) technology, its numerous applications and its intersection with emerging technologies. This book traces the history of AR from its early development, discussing the fundamentals of AR and its associated science. The handbook begins by presenting the development of AR over the last few years, mentioning the key pioneers and important milestones. It then moves to the fundamentals and principles of AR, such as photogrammetry, optics, motion and objects tracking, and marker-based and marker-less registration. The book discusses both software toolkits and techniques and hardware related to AR, before presenting the applications of AR. This includes both end-user applications like education and cultural heritage and professional applications within engineering fields, medicine and architecture amongst others. The book concludes with the convergence of AR with other emerging technologies such as Industrial Internet of Things and Digital Twins. The handbook presents a comprehensive reference on AR technology from an academic, industrial and commercial perspective, making it an invaluable resource for audiences from a variety of backgrounds. *Dangerous Energy* Wayne D. Cocroft, 2014-06-15. This book comprises a national study of the explosives industry and provides a framework for identification of its industrial archaeology and social history. Few

monuments of gunpowder manufacture survive in Britain from the Middle Ages although its existence is documented Late 17th century water powered works are identifiable but sparse In the later 18th century however the industry was transformed by state acquisition of key factories notably at Faversham and at Waltham Abbey In the mid 19th century developments in Britain paralleled those in continental Europe and in America namely a shift to production on an industrial scale related to advances in armaments technology The urgency and large scale demands of the two world wars brought state directed or state led solutions to explosives production in the 20th century Yhe book s concluding section looks at planning preservation conservation and presentation in relation to prospective future uses of these sites
