Design of Office Information Systems Clarence A. Ellis, Najah

Naffah, 2012-12-06 The goal of this book is to present a framework within which the myriad of office technologies and office systems design techniques can be better understood There are a number of office books which deal with the social organizational aspects of office automation or with office equipment introduction strategies This book differs from those in that it is written by technical computer people for technical computer people As such it assumes a general computer literacy and contains a technical emphasis with a social fiber woven in Besides the framework we also present the current state of office primitives office tools and office technology We cover relevant work on going by international standards bodies and we discuss the concepts that are emerging or which we feel will be emerging from universities and industrial research laboratories Office technologies and techniques are classified as personal environment aids versus communal environment aids We now fully realize how difficult it is to write a coherent book within this fuzzy interdisciplinary rapidly changing field Concepts have been stressed wherever possible there are some sub areas where the generalizing concepts have not yet emerged We also realize the potential danger of obsolescence We have tried to combat this somewhat by the presentation of concepts generic tool design and emphasizing our framework This book is not a substitute for reading of the current periodical literature that is where the most timely information lies [CSCW in Practice: an Introduction and Case Studies](#)

Dan Diaper, Colston Sanger, 2012-12-06 Dan is this book going to provide a substantial coherent and timely contribution to CSCW or is it just going to be a ragbag of papers from several meetings stuck together The latter of course Colston However and the However was rather long and technical but not substantially different in overall content from that of this preface Most of the papers contained in this book were initially presented at meetings organized by the UK's Computer Supported Cooperative Work CSCW Special Interest Group in 1991 but the book is not a proceedings whatever the above quotation suggests Readers will immediately notice that unlike typical proceedings all the references are placed together at the end of the book and that there is a substantial index the hall mark of all proper technical books of quality If you choose to delve further than this preface you will find that each chapter is cross referenced thus you also gain a coherent structure across chapters an advantage traditionally associated with high quality single author books Furthermore turning apparent

disadvantage to advantage while single author books must inevitably present the idiosyncratic perspective of their author in this book and appropriately for a young area such as CSCW you will be presented with the views of a dozen CSCW experts who all have considerable hard won experience gained over many years

Office Systems A. A. Verrijn Stuart, Rudy A. Hirschheim, 1986 Hardbound The office system problems discussed in this book all have aspects that require approaches from the empirical angle the formalized description or the engineering angle However the ultimate challenge is how to provide consistency and harmonize the partial results The problems encountered when studying and developing office systems concern the technical and the human aspects and above all the integration of the two Better mechanisms for effectiveness measurement are felt to be needed in connection with the design process the design product and the actual system The contributions included range from fundamental theory to practical application and provide a broad variety of perspectives into the field The subject of modelling and its connection with the practical side of OIS office information systems is a recurrent element in almost all papers and is approached either from the technological organizational or implementation point

Coordination Theory and Collaboration Technology Gary M. Olson, Thomas W. Malone, John B. Smith, 2013-05-13 The National Science Foundation funded the first Coordination Theory and Collaboration Technology initiative to look at systems that support collaborations in business and elsewhere This book explores the global revolution in human interconnectedness It will discuss the various collaborative workgroups and their use in technology The initiative focuses on processes of coordination and cooperation among autonomous units in human systems in computer and communication systems and in hybrid organizations of both systems This initiative is motivated by three scientific issues which have been the focus of separate research efforts but which may benefit from collaborative research The first is the

effort to discover the principles underlying how people collaborate and coordinate work efficiently and productively in environments characterized by a high degree of decentralized computation and decision making The second is to gain a better fundamental understanding of the structure and outputs of organizations industries and markets which incorporate sophisticated decentralized information and communications technology as an important component of their operations The third is to understand problems of coordination in decentralized or open computer systems
