Designing with Natural Materials Graham A. Ormondroyd, Angela F. Morris, 2018-09-03 In a world now forced to address the issues of sustainability environmental impact and the widespread pollution of land and oceans with manmade materials alternative resources must be considered for the future of the planet A vast array of natural materials is available throughout the world with properties that are often superior to the man made alternatives Designing with Natural Materials fills the gap between the current scientific knowledge of the use of natural materials and product design and acts as a bridge between the two disciplines The book serves as an introduction to natural materials within the context of design The chapters include case studies research and a historical perspective It develops ideas of designing with natural materials in specific areas and looks to the future of new biobased materials and how these will influence design The work offers insight to designers of biobased materials across a range of different design disciplines while also providing insights to scientists on the process of design production and the needs of a material beyond those traditionally analyzed in the laboratory The final chapters touch on the use of bioinspiration and biomimicry in the development and use of biobased materials and how natural design will influence both material design and products in the future The book will be of interest to engineers scientific researchers professional designers students those working in industry who are considering using natural materials as an alternative to current unsustainable options and anyone who has an interest in the subject

What Is Cosmopolitical Design? Design, Nature and the Built Environment Albena Yaneva, Alejandro Zaera-Polo, 2017-05-15 The scale of ecological crises made us realize that every kind of politics has always been cosmopolitics politics of a cosmos Cosmos embraces everything including the multifarious natural and material entities that make humans act The book examines cosmopolitics in its relation to design practice Abandoning the modernist idea of nature as being external to the human experience a nature that can be mastered by engineers and scientists from outside the cosmopolitical thinking offers designers to embark in an active process of manipulating and reworking nature from within To engage in cosmopolitics this book argues means to redesign create instigate and compose every single feature of our common experience In the light of this new understanding of nature we set the questions What is the role of design if nature is no longer salient enough to provide a background for human activities How can we foster designers own force and make present what causes designers to think feel and act How do designers make explicit the connection of humans to a variety of entities with different ontology rivers species particles materials and forces How do they redefine political order by bringing together stars prions and people In effect how should we understand design practice in its relation to the material and the living world In this volume anthropologists science studies scholars political scientists and sociologists rethink together the meaning of cosmopolitics for

design At the same time designers architects and artists engage with the cosmopolitical question in trying to imagine the future of architectural and urban design The book contains original empirical chapters and a number of revealing interviews with artists and designers whose practices set examples of cosmopolitically correct design
