Designing Our Descendants Audrey R. Chapman, Mark S. Frankel, 2003-08-21 The Human Genome Project discoveries in molecular biology and new reproductive technologies have advanced our understanding of how genetic science may be used to treat persons with genetic disorders Greater knowledge may also make possible genetic interventions to enhance normal human characteristics such as height hair or eye color strength or memory as well as the transmittal of such modifications to future generations The prospect of inheritable genetic modifications or IGMs whether for therapeutic or enhancement purposes raises complex scientific ethical and regulatory issues Designing Our Descendants presents twenty essays by physicians scientists philosophers theologians lawyers and policy analysts addressing these issues from diverse perspectives In three sections the authors discuss the short and long term scientific feasibility of IGM technology ethical and religious issues related to safety justice morality reproductive rights and enhancement and regulatory issues including the necessity of public input and oversight and the influence of commercialization Their goal is to open a dialogue engaging not only scholars and scientists but also government officials and concerned citizens The authors conclude that while IGM cannot be carried out safely and responsibly on humans utilizing current methods it is important to begin public discussion now to determine whether and if so how to proceed Eric M Meslin Indiana University

Genetic Engineering Mark Y. Herring, 2005-12-30 Genetic engineering has quickly become one of the more controversial issues of our time Herring provides a detailed history of the debate in a fair and balanced manner using proponents points of view to make individual cases both pro and con Narrative chapters cover such topics as the Human Genome Project gene splicing cloning genetically altered foods and DNA and crime solving Students and the general public will find a comprehensive survey of the genetic engineering debate Appendices include statements from Robert P George and Peter Singer two of the most prominent

scholars on the subject and a bibliography of print and electronic resources for further research

Design and Destiny Ronald Cole-Turner, 2008 Scholars discuss the genetic modification of embryonic cells from the viewpoints of traditional Jewish and Christian teaching considering both the possible therapeutic benefits of this technology and moral concerns about its implementation We are approaching the day when advances in biotechnology will allow parents to design a baby with the traits they want The continuing debate over the possibilities of genetic engineering has been spirited but so far largely confined to the realms of bioethics and public policy Design and Destiny approaches the question in religious terms discussing human germline modification the genetic modification of the embryonic cells that become the eggs or sperm of a developing organism from the viewpoints of traditional Christian and Jewish teaching The contributors leading religious scholars and writers call our attention not to technology but to humanity reflecting upon the meaning and destiny of human life in a technological age Many of these scholars argue that religious teaching can support human germline modification implemented for therapeutic reasons although they offer certain moral conditions that must be met The essays offer a surprising variety of opinions including a discussion of Judaism's traditional presumption in favor of medicine an argument that Catholic doctrine could accept germline modification if it is therapeutic for the embryo an argument implying that traditional Christian teaching permits germline modification whether for therapy or enhancement and a classical Protestant view that germline modification should be categorically opposed Contributors Lisa Sowle Cahill Nigel M de S Cameron Ronald Cole Turner Amy Michelle DeBaets Celia Deane Drummond Elliot Dorff H Tristram Engelhardt Jr Thomas A Shannon James J Walter

and health management **Reprogenetics** Lori P. Knowles, Gregory E. Kaebnick, 2007-04-10 Publisher Description **A Christian Response to the New Genetics** David H. Smith, Cynthia B. Cohen, 2003 Life is a gift that includes powers to be used and celebrated but that doesn't necessarily justify the use of every new power that comes along A Christian Response to the New Genetics appeals to both secular and religious readers in the center of the great debate over our new genetic powers These essays affirm many traditional Christian perspectives and virtues while also introducing new insights The authors explore a broad range of topics including genetic testing gene transfer genetic manipulation patenting health insurance and the moral status of embryos They conclude it is naïve to either outright reject or wholeheartedly embrace the new genetic powers In fact sometimes the best we can expect is to learn how to cope with moral uncertainty A Christian Response to the New Genetics originated with initiatives of the Episcopal Church but the book is neither an official statement of Episcopal theological ethics nor a parochial lamentation Regulating Human Biological Enhancements Henry T. Greely, 2005 *The Nature of Our Humanity* Paul T. Jersild, 2009 This book addresses a current frontline issue in the perennial exchange between science and religion Jersild surveys the contemporary scene in genetic research and the visionary goals of a number of scientists concerning the human future He focuses on human identity Who Are We as the critical question first addressing our biological origins in light of evolution and presenting a holistic understanding of human nature He then turns to the world of biotechnology and the tension between human limitations and human potential in light of prospective genetic enhancements The implications of genetic engineering the impact of pharmacology and the human desire for perfection and immortality all enter into a volatile mix of ideas and aspirations concerning the human future Jersild brings a Christian perspective to these developments in spelling out a responsible stance **Ethics and Newborn Genetic Screening** Mary Ann Baily, Thomas H. Murray, 2009-06-15 D University of Washington Mary Anderlik Majumder Baylor College of Medicine American Journal of Human Genetics **The Human Predicament II** Dennis V. Razis, 2003
