ARTHUR EDMUNDS

DESIGNING POWER & SAIL

Designing Power And Sail

J. Du V. Grosvenor

Designing Power And Sail:

Designing Power & Sail Arthur Edmunds, 1998 This book focuses on the design and engineering process for both power and sail. It looks at why your boat is designed and built as you see it now; it explains why it has certain characteristics both positive and negative and gives formulas for finding hull design pressure and speed predictions. How to Design a Boat John Teale, 2002 This handbook takes the novice step by step through all the stages of designing both power and sailing boats so that with no previous experience they can produce a worthwhile design. It includes working drawings and typical line plans from a wide range of vessels. The calculations require only basic mathematical skills and the text is written in a simple and straightforward style. **How to Design a Boat** John Teale, 2011-01-01 This straightforward guide is designed to take the novice step by step through the stages of designing both power and sailing boats explaining the reasons behind the procedures and using typical line plans and working drawings to help understanding. Since it was first published How to Design a Boat has proved itself to be a bestseller. A brilliant little book. *Workboat World* Thoroughly recommended. *Motor Boat Yachting* Model Yachts and Boats: Their Designing, Making, Sailing J. Du V. Grosvenor, 1882 Designs of Ideal Motor Boats and how to Design a Motor Boat Charles Frederic Chapman, 1920 **A Manual of Yacht and Boat Sailing** Dixon Kemp, 1880 *Motor Boats and Boat Motors, Design, Construction, Operation and Repair ...* Victor Wilfred Pagé, 1920 Elements of Yacht Design Norman Locke Skene, 1927 *Space Propulsion and Spaceship Design* Farid Gamgami, 2025-02-10 The objective of this textbook is to provide a synopsis of propulsion technologies in the context of spaceship design. The author identified a lack of multidisciplinary textbooks that explain to students both the technology and physics of space propulsion as well as its relationship to other disciplines in the process of spaceship design. To make the subject more tangible the propulsion demanding context of space exploration was chosen. The book therefore begins with the astronomical context relevant to human exploration of the solar system. This challenging endeavour requires powerful space propulsion systems of various types. Existing and emerging technologies are systematically discussed. Principle similarities and technological analogies between the different types are highlighted. Starting from the physical working principle the book progressively extends the view to subsystem and system design aspects. This approach recognises that the propulsion subsystem is the most defining architectural element of large spacecraft i.e. starships. Such a comprehensive presentation of propulsion technology from a system perspective is not yet reflected in the existing literature. In order to apply the fundamental knowledge provided in the first 9 chapters a mission to the dwarf planet Ceres is presented where different propulsion technologies have to be combined to achieve the mission objectives. In this way the reader is introduced to the basics of requirements breakdown, design space analysis and the technical trade off process, all of which are essential for early mission planning. The book is aimed at advanced undergraduate and graduate students, recent postgraduates and newcomers to the field of spacecraft design where propulsion is essential. *Sailing Yacht Design* Douglas Phillips-Birt, 1976
