**Designing Incentive Regulation for the Telecommunications Industry** David E. Sappington, Dennis L.

Weisman, 1996 This book applies new advances in economic theory regarding the asymmetry of information between firms and their regulators to the design of improved telecommunications regulation      **Incentive Regulation and the**

**Regulation of Incentives** Glenn Blackmon, 2012-12-06 The class is theory of price regulation assumed that the regulator knows the firm's costs the key piece of information that enables regulators to pressure firms to choose appropriate behaviors The regulatory problem was reduced to a mere pricing problem the regulator's goal was to align price with marginal cost subject to the constraint that revenues must cover costs Elegant and important insights ensued The most important was that regulation was inevitably a struggle to achieve second best outcomes Ramsey pricing was a splendid example Reality proved harsh to regulatory theory The firm's costs are by no means known to the regulator At best the regulator may know how much is currently spent to provide services but hardly what costs would be if the firm vigorously pursued efficiency Even if the current cost curve were known to the regulator technologies change so swiftly that today's costs are a very poor indicator of tomorrow's and those are the costs that will determine the firm's future decisions With the burgeoning attention to information considerations and game theory in economics the regulator's problem of eliciting host information about cost has received considerable attention In most cases however it has been in context that are both static and stylized such analyses rarely capture many of the essential elements of real world regulatory issues This volume represents a fresh approach It reflects Glenn Blackmon's twin strengths a keen analytic mind and important experience in the regulatory arena      **The**

**Environmental Challenge of the 1990s**, 1990      **Incentives In Procurement Contracting** Jim Leitzel, 2019-08-19 This volume presents a nontechnical treatment of issues that arise in procurement contracting with an emphasis on major weapons systems procurement Employing the economic theory of agency as their analytical framework contributors assess the incentives that arise for both buyers and sellers in different contractual settings Procurement contra      Price Caps and Incentive Regulation in Telecommunications Michael A. Einhorn, 2012-12-06 Michael A Einhorn In continuing to deregulate telecommunications companies regulators have begun to consider alternative approaches to traditional cost based price regulation as a means of encouraging monopoly efficiency promulgating technological innovation protecting consumers and reducing administrative costs Under cost based regulatory procedures that had been used prices were designed to recover

the regulated company's costs plus an allowed rate of return on its rate base this strategy was costly to administer provided no consistent incentives to cost efficiency and technological improvement afforded many opportunities for strategic misrepresentation of reported costs and may have encouraged both uneconomic expansion of the utility's rate base and cross subsidization of its competitive services A category of alternative regulatory approaches can be classified broadly as social contracts Under the general strategy of social contract regulation regulators first delimit a group of regulated core services that they continue to regulate and then stipulate a list of constraints that the utility must agree to meet in the future in exchange regulators agree to detariff or deregulate entirely other competitive or nonessential services that the utility may offer As long as no stipulated constraints are violated the utility may price freely any service if it reduces costs it may keep a share of its profits According to the National Telecommunications Information Administration NTIA 1987 social contract agreements of one form or another have been considered or implemented in a majority of American states
