## **Designs And Finite Geometries:**

*Designs and Finite Geometries* Dieter Jungnickel, 2012-12-06 *Designs and Finite Geometries* brings together in one place important contributions and up to date research results in this important area of mathematics *Designs and Finite Geometries* serves as an excellent reference providing insight into some of the most important research issues in the field

**Designs and Finite Geometries** Dieter Jungnickel, 2014-01-15 *Advances in Finite Geometries and Designs* James William Peter Hirschfeld, 1991 This volume comprises papers presented at the Third Isle of Thorns Conference on Finite Geometries and Designs The papers explore the structure and associated incidence structures of Galois geometries and their related automorphism groups Among the main topics covered are generalized quadrangles and  $n$  gons groups acting on geometries linear spaces partial geometries diagram geometries non Desarguesian planes strongly regular graphs and designs This timely collection of articles is expertly presented and will be of interest to research workers and postgraduates in combinatorics design theory and finite geometries

*Finite Geometries and Combinatorial Designs* Earl Sidney Kramer, 1990 The proceedings of an AMS special session on finite geometries and combinatorial designs Topics range over finite geometry combinatorial designs their automorphism groups and related structures

*Finite Geometries and Designs* Peter Jephson Cameron, 1981 This 1981 collection of 33 research papers follows from a conference on the interwoven themes of finite Desarguesian spaces and Steiner systems amongst other topics

**Finite Geometries** Aart Blokhuis, James W.P. Hirschfeld, Dieter Jungnickel, Joseph A. Thas, 2001-07-31 When These are the proceedings of Finite Geometries the Fourth Isle of Thorns Conference which took place from Sunday 16 to Friday 21 July 2000 It was organised by the editors of this volume The Third Conference in 1990 was published as *Advances in Finite Geometries and Designs* by Oxford University Press and the Second Conference in 1980 was published as *Finite Geometries and Designs* by Cambridge University Press The main speakers were A R Calderbank P J Cameron C E Praeger B Schmidt H Van Maldeghem There were 64 participants and 42 contributions all listed at the end of the volume Conference web site <http://www.maths.susx.ac.uk/Staff/JWPH/> Why This collection of 21 articles describes the latest research and current state of the art in the following inter linked areas combinatorial structures in finite projective and affine spaces also known as Galois geometries in which combinatorial objects such as blocking sets spreads and partial spreads ovoids arcs and caps as well as curves and hypersurfaces are all of interest geometric and algebraic coding theory finite groups and incidence geometries as in polar spaces generalised polygons and diagram geometries algebraic and geometric design theory in particular designs which have interesting symmetric properties and difference sets which play an important role because of their close connections to both Galois geometry and coding theory

*Finite Geometries and Block Designs* Timmy Ray Noon, 2013 This thesis is mainly an exposition to the ideas in finite geometry specifically affine and projective planes as well as block designs We conclude with a chapter on how to apply these ideas to coding theory Some of the results we look at include both the Bruck Ryser and Bruck Ryser Chowla theorems

as well as considering isomorphisms and automorphisms of block designs Document **Combinatorics and Finite Geometry** Steven T. Dougherty, 2020-10-30 This undergraduate textbook is suitable for introductory classes in combinatorics and related topics The book covers a wide range of both pure and applied combinatorics beginning with the very basics of enumeration and then going on to Latin squares graphs and designs The latter topic is closely related to finite geometry which is developed in parallel Applications to probability theory algebra coding theory cryptology and combinatorial game theory comprise the later chapters Throughout the book examples and exercises illustrate the material and the interrelations between the various topics is emphasized Readers looking to take first steps toward the study of combinatorics finite geometry design theory coding theory or cryptology will find this book valuable Essentially self contained there are very few prerequisites aside from some mathematical maturity and the little algebra required is covered in the text The book is also a valuable resource for anyone interested in discrete mathematics as it ties together a wide variety of topics Finite Geometries Peter Dembowski, 1968 Reihentext Finite Geometries From the reviews Such a vast amount of information as this book contains can only be accomplished in 375 pages by a very economical style of writing it enables one to have a good look at the forest without being too detracted by the individual trees The author deserves unstinting praise for the skill energy and perseverance which he devoted to this work The finished product confirms what his many earlier contributions to the subject of finite geometry have already indicated namely that he is an undisputed leader in his field Mathematical Reviews Finite Geometries is a very important area of finite mathematics characterized by an interplay of combinatorial geometric and algebraic ideas in which research has been very active and intensive in recent years makes it clear how large is the field covered by the author in his book The material is selected most thoroughly and the author made an effort to collect all that seems to be relevant in finite geometries for the time being Dembowski's work will be a basic reference book of this field and it will be considered as a base of the future research Altogether this is a very well produced monograph Publicationes Mathematicae Debrecen 10 tom 16 Finite Geometries and Designs P. J. Cameron, J. W. P. Hirschfeld, D. R. Hughes, 1981-04-16 Originally published in 1981 this collection of 33 research papers follows from a conference on the interwoven themes of finite Desarguesian spaces Steiner systems coding theory group theory block designs generalized quadrangles and projective planes There is a comprehensive introduction which aims to interest the non specialist in the subject and which indicates how the contributions fit together This is a field of research pursued both for its intrinsic interest and its applications These papers include a number of open problems whose statement requires very little mathematical sophistication **COMBINATORIAL PROBLEMS RELATED TO CODES, DESIGNS AND FINITE GEOMETRIES**, 2017 Abstract An investigation of an open case of the famous conjecture made by Hamada cite Hamada1 is carried out in the first part of this dissertation In 1973 Hamada made the following conjecture Let  $D$  be a geometric design having as blocks the  $t$ -subspaces of  $PG(n, q)$  or  $AG(n, q)$  and let  $m$  be the  $p$ -rank of  $D$  If  $D$  is a design with the same parameters as  $D$  then the  $p$

rank of  $D$  is greater or equal to  $m$  and equality holds if and only if  $D$  is isomorphic to  $D$ . We discuss some properties of the three known nonisomorphic  $2 \times 64 \times 16 \times 5$  designs of 2-rank 16, one being the design of the planes in the 3-dimensional affine geometry over the field of order 4. We also try to find an algebraic way to use the similarities between these designs in a search for counter examples to Hamada's conjecture in affine spaces of higher dimension. Currently we know the existence of 22 projective planes of order 16 up to isomorphism of which 4 are self dual. In the second part of the thesis details of  $2 \times 52 \times 4 \times 1$  designs associated with known maximal 52 arcs are provided. A number of new maximal  $52 \times 4$  arcs in two of the known projective planes of order 16 are established. Newly discovered maximal  $52 \times 4$  arcs give new connections between the projective planes of order 16. Previously the number of pairwise non isomorphic resolutions of  $2 \times 52 \times 4 \times 1$  designs was 30. With the results in Tables 4.2.4.3 this bound is improved. Details of partial geometries coming from known maximal 52 arcs including ours are summarized in Table 4.4. We detail the discovery of 37 new 104 sets of type  $4 \times 8 \times 18$  of which come from unions of non isomorphic maximal 52 arcs. Previous to our work no such examples were known to exist. We discovered that the Johnson plane also contains disjoint maximal 52 arcs. Previously no such sets in the Johnson plane were known. With the results in Tables 4.2.4.3 this bound is improved. **Applications of Finite Geometries to Designs and Codes** David C. Clark, 2011      **Introduction to Finite Geometries** F. Kárteszi, 2014-05-12 North Holland Texts in Advanced Mathematics. Introduction to Finite Geometries focuses on the advancements in finite geometries including mapping and combinatorics. The manuscript first offers information on the basic concepts on finite geometries and Galois geometries. Discussions focus on linear mapping of a given quadrangle onto another given quadrangle, point configurations of order 2 on a Galois plane of even order, canonical equation of curves of the second order on the Galois planes of even order and set of collineations mapping a Galois plane onto itself. The text then ponders on geometrical configurations and nets as well as the pentagon theorem and the Desarguesian configuration, two pentagons inscribed into each other and the concept of geometrical nets. The publication takes a look at combinatorial applications of finite geometries and combinatorics and finite geometries. Topics include generalizations of the Petersen graph, combinatorial extremal problem and theorem of closure of the hyperbolic space. The book is a valuable source of data for readers interested in finite geometries.      Finite Geometries, Block Designs and Related Graphs Jean Elliott Dunbar, 1975
