Creating Personalities For Synthetic Actors Towards Autonomous Personality Agents:

Creating Personalities for Synthetic Actors Robert Trappl, Paolo Petta, 1997-03-20 Progress in computer animation has gained such a speed that before long computer generated human faces and figures on screen will be indistinguishable from those of real humans The potential both for scripted films and real time interaction with users is enormous However in order to cope with this potential these faces and figures must be guided by autonomous personality agents This carefully arranged volume presents the state of the art in research and development in making synthetic actors more autonomous The papers describe the different approaches and solutions developed by computer animation specialists computer scientists experts in AI psychologists and philosophers from leading laboratories world wide Finally a bibliography comprising more than 200 entries enable further study

Intelligent Virtual Agents Jonathan Gratch, Michael Young, Ruth Aylett, Daniel Ballin, Patrick Olivier, 2006-08-10 This book constitutes the refereed proceedings of the 6th International Workshop on Intelligent Virtual Agents IVA 2006 The book presents 24 revised full papers and 11 revised short papers together with 3 invited talks and the abstracts of 19 poster papers The papers are organized in topical sections on social impact of IVAs IVAs recognizing human behavior human interpretation of IVA behavior embodied conversational agents characteristics of nonverbal behavior and more

Intelligent Virtual Agents Thomas Rist, Ruth Aylett, Daniel Ballin, Jeff Rickel, 2003-12-15 This volume containing the proceedings of IVA 2003 held at Kloster Irsee in Germany September 15 17 2003 is testimony to the growing importance of Intelligent Virtual Agents IVAs as a research field We received 67 submissions nearly twice as many as for IVA 2001 not only from European countries but from China Japan and Korea and both North and South America As IVA research develops a growing number of application areas and platforms are also being researched Interface agents are used as part of larger applications often on the Web Education applications draw on virtual actors and virtual drama while the advent of 3D mobile computing and the convergence of telephones and PDAs produce geographically aware guides and mobile entertainment applications A theme that will be apparent in a number of the papers in this volume is the impact of embodiment on IVA research a characteristic differentiating it to some extent from the larger field of software agents

Co-Corporeality of Humans, Machines, & Microbes Barbara Imhof, Daniela

Mitterberger, Tiziano Derme, 2022-07-18 On architecture AI and microbiology The theory of Co Corporeality is based on a conception of the built environment as a biological entity that opens up a space for coexistence and interaction between humans and microbial life Based on design led research this book explores how we can develop environments for a multispecies world It focuses on the agency of both human and nonhuman actors New sensor tools enable observation of and interaction between these different actors Co Corporeality links microbiology to material science artificial intelligence and architecture The focus is on how microbial activity can create new protoarchitectural materials how living systems can be integrated into architecture and cooperate along different time scales How artistic interventions connect human and nonhuman worlds through tracking systems and machine learning algorithms With essays by Rachel Armstrong Alex Arteaga Philip Beesley Jens Hauser and others Images of experiments and installations *Artificial Intelligence in Education* Gautam Biswas, Susan Bull, Judy Kay, Antonija Mitrovic, 2011-06-16 This book constitutes the refereed proceedings of the 15th International Conference on Artificial Intelligence in Education AIED 2011 held in Auckland New Zealand in June July 2011 The 49 revised full papers presented together with three invited talks and extended abstracts of poster presentations young researchers contributions and interactive systems reports and workshop reports were carefully reviewed and selected from a total of 193 submissions The papers report on technical advances in and cross fertilization of approaches and ideas from the many topical areas that make up this highly interdisciplinary field of research and development including artificial intelligence agent technology computer science cognitive and learning sciences education educational technology game design psychology philosophy sociology anthropology and linguistics *Handbook of Virtual Environments* Kelly S. Hale, Kay M. Stanney, 2002-01-01 This Handbook with contributions from leading experts in the field provides a comprehensive state of the art account of virtual environments VE It serves as an invaluable source of reference for practitioners researchers and students in this rapidly evolving discipline It also provides practitioners with a reference source to guide their development efforts and addresses technology concerns as well as the social and business implications with which those associated with the technology are likely to grapple While each chapter has a strong theoretical foundation practical implications are derived and illustrated via the many tables and figures presented throughout the book The Handbook presents a systematic and extensive coverage of the primary areas of research and development within VE technology It brings together a comprehensive set of contributed articles that address the principles required to define system requirements and design build evaluate implement and manage the effective use of VE applications The contributors provide critical insights and principles associated with their given area of expertise to provide extensive scope and detail on VE technology After providing an introduction to VE technology the Handbook organizes the body of knowledge into five main parts System Requirements specifies multimodal system requirements including physiological characteristics that affect VE system design Design Approaches and Implementation Strategies addresses cognitive design strategies identifies perceptual illusions that

can be leveraged in VE design discusses navigational issues such as becoming lost within a virtual world and provides insights into structured approaches to content design Health and Safety Issues covers direct physiological effects signs symptoms neurophysiology and physiological correlates of motion sickness perceptual and perceptual motor adaptation and social concerns Evaluation addresses VE usability engineering and ergonomics human performance measurement in VEs usage protocols and provides means of measuring and managing visual proprioceptive and vestibular aftereffects as well as measuring and engendering sense of presence Selected Applications of Virtual Environments provides a compendium of VE applications The Handbook closes with a brief review of the history of VE technology The final chapter provides information on the VE profession providing those interested with a number of sources to further their quest for the keys to developing the ultimate virtual world

Intelligent Virtual Agents, 2003 *Anti-boxology* Phoebe Sengers, 1998 Abstract Artificial Intelligence AI the design of technology with attributes that we traditionally associate with living beings generally follows the broader scientific tradition of focusing on technical problems and their solutions within a relatively constrained framework The cultural studies of science on the other hand insists that scientific work should be understood as it springs from and influences other cultural phenomena including the background of metaphors and assumptions that influence the way scientists do their work In this thesis I explore the possibilities for AI and the cultural studies of science to engage in a mutually beneficial alliance by studying AI as a culturally situated activity and by using results of that study to generate novel technology Specifically I focus on the design of autonomous agents programs which are intended to represent a complete person animal or character In the alternative AI tradition these agents are created from a set of independent building blocks termed behaviors A major open question is how these behaviors can be synthesized to create an agent with overall coherent behavior I trace the problems in behavior integration to a strategy called atomization that AI shares with industrialization and psychiatric institutionalization Atomization is the process of breaking agents into modular chunks with limited interaction and represents a catch 22 for AI while this strategy is essential for building understandable code it is fatal for creating agents that have the overall coherence we have come to associate with living beings I tackle this problem of integration by redefining the notion of agent Instead of seeing agents as autonomous creatures with little reference to their sociocultural context I suggest that agents can be thought of in the style of cultural studies as a form of communication between the agent's designer and the audience which will try to comprehend the agent's activity With this metaphor as a basis it becomes clear that we need to integrate not the agent's internally defined code but the way in which the agent presents itself to the user Narrative psychology suggests that agents will be maximally comprehensible as intentional beings if they are structured to provide cues for narrative I therefore build an agent architecture the Expressivator which provides support for narratively comprehensible agents most notably by using behavioral transitions to link atomic behaviours into narrative sequences

Virtual Reality Technologies for Future Telecommunications Systems Algirdas Paktas, Ryoichi

Komiya,2002 Virtual Reality Telecommunication Systems VRTS will transmit human verbal and nonverbal communication messages therefore human to network interface considerations are essential The VRTS will attempt to capture the entire human body by a set of sensors at the transmitting end and will convey these feelings to the human body at the receiving end with actuators This book provides a broad overview of the current research in the area of creating future VRTS as well as presenting developments in closely related areas While many excellent articles have been written on specific applications of Virtual Reality in general there is little at present that covers the scope of the entire telecommunications network This book describes the role that VRTS will play in the telecommunications networks of the future It offers not only a high level overview of undergoing research but also a detailed analysis of prototype implementations The first comprehensive book that covers the full scope of VRTS in the context of telecommunications and offers a guide to employing Virtual Reality in telecommunications networks Offers an in depth discussion of this hot topic Considers the emergence of both new network architectures and the trend toward convergence between the public switched telephone network and the Internet Features the shared knowledge and latest findings of top researchers from companies universities such as NTT Cyber Space Labs Japan Lucent Technologies USA and QMW GB Essential reading for experienced researchers and network planners engineers and visualisation engineers as well as advanced undergraduate graduate students studying electronic engineering communications technology and computer science *Parallel Problem Solving from Nature--PPSN ...* ,2000 *Index of Conference Proceedings* British Library.
