## **Creation Of Ideas In Physics Studies For Methodology Of Theory Construction:**

**The Creation of Ideas in Physics** J. Leplin, 2012-11-02 The unusual ambition of this volume is to engage scientists historians and philosophers in a common quest to delineate the structure of the creative thinking responsible for major advances in physical theory The topic does not fit anyone discipline s proprietary interests and can only be pursued cooperatively This volume was conceived in the hope that the importance of learning something general about how theories are developed and what makes the difference between productive and abortive directions of theoretical inquiry could overcome well known barriers to such cooperation The volume originated in a conference held at the University of North Carolina Greensboro in 1988 as an installment of the annual Greensboro Symposium in Philosophy Most of the papers descend from papers presented on that occasion The authors are well known in their own disciplines but should be identified to the wider audience for interdisciplinary work in science studies Rafael Sorkin of Syracuse University and Don Page of the University of Alberta are theoretical physicists who have done research in quantum gravity and cosmology John Stachel a physicist at Boston University is widely known as the Director of the Einstein Project and editor of Einstein s papers William Harper a historian of science and philosopher at the University of Western Ontario is a Newton scholar and specialist in decision theory

**On the Epistemology of Data Science** Wolfgang Pietsch, 2021-12-10 This book addresses controversies concerning the epistemological foundations of data science Is it a genuine science Or is data science merely some inferior practice that can at best contribute to the scientific enterprise but cannot stand on its own The author proposes a coherent conceptual framework with which these questions can be rigorously addressed Readers will discover a defense of inductivism and consideration of the arguments against it an epistemology of data science more or less by definition has to be inductivist given that data science starts with the data As an alternative to enumerative approaches the author endorses Federica Russo s recent call for a variational rationale in inductive methodology Chapters then address some of the key concepts of an inductivist methodology including causation probability and analogy before outlining an inductivist framework The inductivist framework is shown to be adequate and useful for an analysis of the epistemological foundations of data science The author points out that many aspects of the variational rationale are present in algorithms commonly used in data science

Introductions to algorithms and brief case studies of successful data science such as machine translation are included Data science is located with reference to several crucial distinctions regarding different kinds of scientific practices including between exploratory and theory driven experimentation and between phenomenological and theoretical science Computer scientists philosophers and data scientists of various disciplines will find this philosophical perspective and conceptual framework of great interest especially as a starting point for further in depth analysis of algorithms used in data science

Geometry and Experimental Method in Locke, Newton and Kant Mary Domski, 2003 *Revival: Philosophy and the Physicists (1937)* Lizzie Susan Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for that

section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories nor to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based     Perspectives on Science ,2006     *An Elementary Treatise on Fourier's Series, and Spherical, Cylindrical, and Ellipsoidal Harmonics, with Applications to Problems in Mathematical Physics* William Elwood Byerly,1893     **A Course in Mathematical Analysis: pt.2. Huntington,     **Subjectivity: Theory, Epistemology and Method** Fernando González Rey,Albertina Mitjáns Martínez,2025-11-05 This book is a comprehensive introduction to the theoretical methodological and epistemological aspects of the Theory of Subjectivity created by Fernando González Rey 1949 2019 After the publication of the book *Epistemología Cualitativa y Subjetividad* Qualitative Epistemology and Subjectivity by Fernando González Rey in 1997 which marked the beginning of efforts to incorporate the topic of subjectivity from a cultural historical perspective research grounded in this approach has multiplied This book aims to highlight the development of the Theory of Subjectivity since its initial formulation and to further deepen and clarify the relationship between the Theory of Subjectivity Qualitative Epistemology and the Constructive Interpretive Methodology This volume also intends to delve deeper in a didactic way into the process of constructing information from the perspective of the Theory of Subjectivity To this end it discusses the results of studies based on this framework with the aim of delving into this complex process of theoretical construction in research overcoming the idea of empirical research so widespread in the empirical instrumental paradigm Rejecting the logic of data collection as the accumulation of fragments the authors emphasize the research as a theoretical construction in which dialogue constitutes a subjective and relational space In this space participants and researchers become agents whose singular productions make possible the emergence of information relevant to the purpose of the research The theoretical model emerges as the living core of research constantly constituted by new indicators hypotheses and constructions that integrate empirical expressions with conceptual elaboration This is an English edition of a book originally published in Portuguese The translation of the original manuscript into English was done with the help of artificial intelligence The technical and stylistic revision was carried out by the specialists Daniel Magalhães Goulart Jos Fernando Patiño Torres and
