[Religious Perspectives on Bioethics and Human Rights](#) Joseph Tham, Kai Man Kwan, Alberto Garcia, 2017-09-06 This book deals with the thorny issue of human rights in different cultures and religions especially in the light of bioethical issues In this book experts from Christianity Judaism Islam Buddhism Daoism Hinduism and Confucianism discuss the tension between their religious traditions and the claim of universality of human rights The East West contrast is particularly evident with regards to human

rights Some writers find the human rights language too individualistic and it is foreign to major religions where the self does not exist in isolation but is normally immersed in a web of relations and duties towards family friends religion community and society Is the human rights discourse a predominantly Western liberal ideal which in bioethics is translated to mean autonomy and free choice In today s democratic societies laws have been drafted to protect individuals and communities against slavery discrimination torture or genocide Yet it appears unclear at what moment universal rights supersede respect for cultural diversity and pluralism This collection of articles demonstrates a rich spectrum of positions among different religions as they confront the ever more pressing issues of bioethics and human rights in the modern world This book is intended for those interested in the contemporary debates on religious ethics human rights bioethics cultural diversity and multiculturalism

philosophy of medicine and disability studies and draws on a wide array of theological resources including Barth Bonhoeffer Aquinas and recent disability theologies By enabling us to understand health in the wider perspective of the flourishing and ultimate destiny of human beings Messer's *Flourishing* sheds new light on a range of practical bioethical issues and dilemmas

The Moral Status of Persons Gerhold K. Becker, 2000 The advances in molecular biology and genetics medicine and neurosciences in ethology and environmental studies have put the concept of the person firmly on the philosophical agenda Whereas earlier times seemed to have a clear understanding about the moral implications of personhood and its boundaries today there is little consensus on such matters Whether a patient in the last stages of Alzheimer's disease is still a person or whether a human embryo is already a person are highly contentious issues This book tackles the issue of personhood and its moral implications head on The thirteen essays are representative of the major strands in the current bioethical debate and offer new insights into humanity's moral standing its foundations and its implications for social interaction While most of the essays approach the issue by drawing on the rich intellectual tradition of the West others offer a cross cultural perspective and make available for ethical consideration the philosophical resources and the wisdom of the East The contributors to this book are highly recognized philosophers ethicists theologians and professionals in health care and medicine from East Asia China Japan Europe and North America The first part of the book probes the foundations of personhood Examining critically the main theories on personhood in contemporary philosophy the authors offer alternatives that better respond to contemporary challenges and their implications for bioethics The focus of the second part is firmly on the Confucian relational concept of the person and on the social constitution of personhood in traditional Japanese culture While the essays challenge the individualistic features of personhood in the Western tradition they lay the foundations for a richer concept that holds great promise for the resolution of moral dilemmas in modern medicine and health care The third part of the book enters into a dialogue with the Christian tradition and draws on its spiritual heritage in the search for answers to the contemporary challenges to human dignity and value Its focus is on the Catholic social thought and Lutheran theology The fourth part addresses the moral status of persons in view of specific issues such as the effects of brain injury gene therapy and human cloning on personhood It extends the scope of research beyond human beings and inquires also into the moral status of animals
