Hi Humans, I am AI Harshdeep Sharma, 2025-07-14 Discover a world first book that brings the future to life today narrated by author from the perspective of Artificial Intelligence AI itself Navigating Tomorrow offers a truly unique perspective inviting you to experience the AI journey as a direct conversation about shaping our future Authored by Harshdeep Sharma this is an essential guide for every citizen who uses a computer It demystifies AI's profound capabilities

and its fundamental reshaping of every home profession and aspect of our lives from 2023 to 2050 *Higher Ed: Tough Times in a World Divided* Phillip L Beukema, 2025-04-02 It's no secret that the world of higher education in the U.S. is in trouble. It faces image problems, some of the worst financial pressures ever, political turmoil in at least half the states in our country, and much more. Not all these challenges are of academia's own making, but many are. Too many silos, deep roots in tradition, and confused institutional missions all contribute to the state of affairs. Chapter by chapter, the author lays bare what he regards as the most consequential matters confronting our higher education enterprise today. These include everything from enrollment volatility and decline to the impact of a culture war on the DEI movement, dim prospects for improved operational funding, growing partisanship of university trustees and system boards, the impacts of heavy reliance on contingent faculty, increasingly unattractive and non-competitive faculty salaries, and institutional missions that have strayed or enlarged with unintended consequences. As exhausting as this short list is, it covers only part of the territory. Colleges and universities of all stripes are affected, from community and technical colleges to four-year and graduate colleges and universities, both private and public. While there is no silver bullet at the ready, the author outlines a rough blueprint for the kinds of initiatives and strategies needed to tackle the most consequential challenges we face today. For many, a school's survival is truly at stake, but achieving a turnaround is possible only if their leaders have the vision and courage to guide their institutions in the direction of life-changing innovation and renewal. **Scientific American**, 1916 **American Architect and the Architectural Review**, 1929 Applied Machine Learning and AI for Engineers Jeff Prosise, 2022-11-10 While many introductory guides to AI are calculus books in disguise, this one mostly eschews the math. Instead, author Jeff Prosise helps engineers and software developers build an intuitive understanding of AI to solve business problems. Need to create a system to detect the sounds of illegal logging in the rainforest, analyze text for sentiment, or predict early failures in rotating machinery? This practical book teaches you the skills necessary to put AI and machine learning to work at your company. Applied Machine Learning and AI for Engineers provides examples and illustrations from the AI and ML course. Prosise teaches at companies and research institutions worldwide. There's no fluff and no scary equations, just a fast start for engineers and software developers, complete with hands-on examples. This book helps you learn what machine learning and deep learning are and what they can accomplish. Understand how popular learning algorithms work and when to apply them. Build machine learning models in Python with Scikit-Learn and neural networks with Keras and TensorFlow. Train and score regression models and binary and multiclass classification models. Build facial recognition models and object detection models. Build language models that respond to natural language queries and translate text to other languages. Use Cognitive Services to infuse AI into the apps that you write. Practical AI on the Google Cloud Platform Micheal Lanham, 2020-10-20 Working with AI is complicated and expensive for many developers. That's why cloud providers have stepped in to make it easier, offering free or affordable state-of-the-art models and training tools to get you started. With this book, you'll learn how

to use Google's AI-powered cloud services to do everything from creating a chatbot to analyzing text images and video. Author Micheal Lanham demonstrates methods for building and training models step by step and shows you how to expand your models to accomplish increasingly complex tasks. If you have a good grasp of math and the Python language, you'll quickly get up to speed with Google Cloud Platform, whether you want to build an AI assistant or a simple business AI application. Learn key concepts for data science, machine learning, and deep learning. Explore tools like Video AI and AutoML Tables. Build a simple language processor using deep learning systems. Perform image recognition using CNNs, transfer learning, and GANs. Use Google's Dialogflow to create chatbots and conversational AI. Analyze video with automatic video indexing, face detection, and TensorFlow Hub. Build a complete working AI agent application.
